Table of Contents

Annexure- 1: Ambient Air Quality Standards

Sl. No.	Pollutant	Time-weighted average	Concentration in ambient air		
			Industrial, Residential, Rural and other areas	**Ecologically sensitive area**	**Method of Measurement**
1	SO_2, $\mu g/m^3$	Annual* 24hrs**	50 80	20 80	Improved West &Gaeke Ultraviolet fluorescence
2	NO_2, $\mu g/m^3$	Annual* 24hrs**	40 80	30 80	Modified Jacob &Hocheisser Chemiluminence
3	PM_{10} $\mu g/m^3$	Annual 24hrs	60 100	60 100	Gravimetric TOEM Beta attenuation
4	$PM_{2.5}$ $\mu g/m^3$	Annual* 24hrs**	40 60	40 60	Gravimetric TOEM Beta attenuation
5	O_3 $\mu g/m^3$	8hrs** 1hr**	100 180	100 180	UV Photometry Chemiluminescence Chemical method
6	Pb $\mu g/m^3$	Annual* 24hrs**	0.50 1.00	0.50 1.00	AAS/ICP method after sampling on EPM2000 ED-XRF using Teflon Filter
7	CO mg/m^3	8 hrs** 1hr.**	02 04	02 04	Non-dispersive Infra-red spectroscopy
8	Benzene$_{\mu g/m^3}$	Annual*	05	05	Gas chromatography based continuous analyser
9	BenzoPyrene, (Particulate phase only) ng/m^3	Annual*	01	01	Solvent extraction followed by HPLC/GC analysis
10	Arsenic ng/m^3	Annual*	06	06	AAS/ICP method after sampling on EPM 2000
11	Nickel $ng/^3$	Annual*	20	20	AAS/ICP method after sampling on EPM 2000
12	NH_3 $\mu g/m^3$	Annual* 24hrs**	100 400	100 400	Chmilumuminescence Indophenol blue method

**Annual arithmetic means of minimum 104 measurements in a year at a particular site taken twice a week 24 hrs at uniform intervals.*

*** 24hrs/08hrs/02 hourly monitored values as applicable, shall be complied with 98% of the time in a year. 2% of time they may exceed the limits but not on two consecutive days of monitoring.*

Annexure- 2: Ambient Noise Quality Standards

Sl. No.	Category of Area / Zone	Limits in dB(A) Leq*	
		Day Time	***Night Time***
A	Industrial area	75	70
B	Commercial area	65	55
C	Residential area	55	45
D	Silence Zone	50	40

Note:

1. *Day time shall mean from 6.00 a.m. to 10.00 p.m.*
2. *Night time shall mean from 10.00 p.m. to 6.00 a.m.*
3. *Silence zone is an area comprising not less than 100 metres around hospitals, educational institutions, courts, religious places or any other area which is declared as such by the competent authority.*
4. *Mixed categories of areas may be declared as one of the four above mentioned categories by the competent authority.*

* *dB(A) Leq denotes the time weighted average of the level of sound in decibels on scale A which is relatable to human hearing.*

A *"decibel" is a unit in which noise is measured.*

"A", *in dB(A) Leq, denotes the frequency weighting in the measurement of noise and corresponds to frequency response characteristics of the human ear.*

Leq: *It is an energy mean of the noise level over a specified period.*

Annexure- 3: Sediment Quality Standard

Level of Pollution (mg./ kg. dry)	Cd.	Cr.	Cu.	Pb.	Zn.
Threshold Effect Level (TEL)	0.68	52.3	18.7	30.2	124
Probable Effect Level (PEL)	4.2	160.4	108.2	112.2	271
Non-Polluted	-	<25	<25	<40	<90
Moderate Polluted	>6	>75	>50	>60	>200
Heavily Polluted	>6	>75	>50	>60	>200

Source: US-EPA

Note: Probable Effect Level (PTL) i.e. the values above which adverse biological affected would frequency occur
Threshold Effect Level (TEL) is the value below which adverse biological effects would be infrequently expect

Annexure- 4: Water Quality Criteria

General Standards for discharge of environment Pollutants Part-A: Effluents					
SN	**Parameter**	**Standards**			
		Inland Surface Water	**Public Sewers**	**Land for Irrigation**	**Marine Coastal Area**
1	Colour and Odour	5 to 25 Agreeable	-	5 to 25 Agreeable	5 to 25 Agreeable
2	Suspended Solids mg/l, Max.	100	600	200	(a) For process waste water-100
	(b) For Cooling water effluent 10 percent above total suspended matter of influent				
3	Particular size of suspended solids	Shall pass 850 microns IS Sieve	-	-	(a) Floatable solids, max. 3 mm
					(b) Settleable solids, max850 microns
4*	---	-	-	---	-
5	pH value	5.5 to 9.0	5.5 to 9.0	5.5 to 9.0	5.5 to 9.0
6	Temperature	Shall not exceed 5oC above the receiving water temperature	-	-	Shall not exceed 5oC above the receiving water temperature
7	Oil and grease (mg/L Max)	10	20	10	20
8	Total residual chlorine mg/1, Max	1	-	-	1
9	Ammonical nitrogen (as N), mg/1 max.	50	50	-	50

No. 3161 / EN / O – 44 / 2018 Date: 19th September, 2018

To
The Additional Chief Secretary,
Irrigation & Waterways Department,
Jalasampad Bhaban, 3rd Floor, Western Block,
Bidhannagar, Salt lake City, Kolkata – 700 091.

Sir,

This has reference to your letter No. 442- IFC/ IW/P/IFC/4M-06/2018 dated 12/09/2018 whereby it was requested to confirm exemption of Environmental Clearance (EC) for the proposed project 'West Bengal Major Irrigation and Flood Management Project'.

It may be observed that as per appendix – IX of MoEF&CC's Notification SO 141(E) dated 15.01.2016 'Dredging and de-silting of dams, reservoirs, weirs, barrages, river, and canals for the purpose of their maintenance, upkeep and disaster management' is exempted from requirement of EC.

As per amendment of EIA Notification vide MoEF&CC's notification S.O. 3977(E) dated 14.08.2018 – 'change in irrigation technology having environmental benefits (eg. From flood irrigation to Drip irrigation etc.) by an existing project without increase in dam height and submergence will not require EC'.

Yours sincerely,

(Niraj Singhal)

Annexure- 15 (a): Sediment quality report of Mundeswari River by RRI

Report on the soil samples collected from the bed of Mundeswari River

1. Introduction:

   From soil samples from the river bed of the Mundeswari at four sites were collected and sent to QCL, River Research Institute, Mohanpur by Hooghly Irrigation Division, I&W Dte, WB. The samples were sent to laboratory for determining their quality in respect of use at suitable place.

2. Lab Test and Result:

   As these were disturbed index properties only could be done on these samples. Visual classification of all the samples sieve analysis on sand samples and Atterberg limit tests on the clay samples were conducted. Results have been presented in Table-1. The particle size distribution curves have been given in Fig-1 and Fig-2.

3. Discussion:

   A. Markunda Ghat- The sample at 1 m below natural ground level (NGL) is yellowish brown fine sand. This sample contains only little mica, however fineness modulus (Criterion for use as construction material) is below 2. The samples at 2,3 and 4 meter are more or less same, yellowish gray silty clay have been very high liquid limit and plasticity index (LL-PL). The silty clays may be said heavy or fat clay. The clays are expected to show high shrink – swell behaviour, but at the same time are highly impervious.

   B. Kelepara- The samples collected from 1,2, 3 and 4 meter below NGL are more or less same, silty clay having index values (LL,PI) and belong to CH group.

   C. Chalkbelia- The samples collected from 1, 2 and 3 meter are fine to medium sand with fineness modulus expected to be not very high. The samples from 4 and 5 meter are silty clay belonging to CH group.

   D. Deehalpara- The samples of 1,2 and 3 meter are loamy clay belonging to CI group. The samples of 4 and 5 meter depth are clayey to loamy sand.

   The sands of these sites yellowish brown fine to medium sand (SP), the fineness modulus i.e. gradation is not good. However the mica content of these sands are low.

   The clays of Markunda Ghat, Kelepara are fat clays, expected to show high shrink – swell activity. However, these are highly impervious.

The clays of Chalkbelia and Deehalpara are of CH and CI Group but are expected to show low to medium swelling potential. These materials may suitably used as embankment or road construction.

No mines or cities (where chances of disposal or accumulation of toxic or heavy metals are more on vacant land)are nearby the sites. The clays (natural moisture contents indicate medium to stiff consistency) are similar to the older alluvium (distinctly different to the gray Gangetic alluvium) of the other Rarh plain (parts of Birbhum, Bankura, Burdwan, Hooghly, and West Midnapur) sites. These materials may safely be used.

MONITORING REPORT

1	**Project**	Environment monitoring for Air Quality/ Water Quality/ Soil Quality/ Noise & Vibration
2	**Proponent**	CTRAN Consulting Limited, Bhubaneswar
3	**Scope of Monitoring**	Parameters as described in Work Order
4	**Information Required**	Test Results of Environment Monitoring for attributes Air/Water/Soil/Noise
5	**Methodology**	Standard Methodology of CPCB / MoEF Guidelines & BIS as applicable
6	**Work Volume**	Water quality – 3 locations Ambient Air Quality – 5 Locations Soil Quality : 5 Locations Noise – 5 stations

Remarks: The test Results for different samples of Ambient Air, Surface Water, Soil and Noise collected from different locations as per directive received from proponent indicate that the locations are complying with the requirements of Environment with respect to the above parameters of analysis

AMBIENT AIR QUALITY MONITORING RESULT

Date of Monitoring	21.08.2018
Location Name	Connecting point of Upper Rampur and Harinkhola Khal

RESULTS :

Parameters	Unit	Pollutants Concentration	NAAQ Standards	Reference Standard
Particulate Matter (size < 10 µm or PM_{10} µm)	µg/m³	41	100	IS 5182 (Part 23)
Particulate Matter (size < 2.5 µm or $PM_{2.5}$ µm)	µg/m³	17	60	**
Sulphur Dioxide (as SO_2)	µg/m³	< 4 µg/m³	80	IS 5182 (Part 2)
Nitrogen Dioxide (as NO_2)	µg/m³	21	80	IS 5182 (Part 6)
Ozone (as O_3)	µg/m³	08	100	* Method No. 411
Lead (as Pb)	µg/m³	< 0.01 µg/m³	1.0	IS 5182 (Part 22)
Carbon Monoxide (as CO)	mg/m³	0.5	02	***
Ammonia (as NH_3)	µg/m³	< 2 µg/m³	400	* Method No. 401
Benzene (as C_6H_6)	µg/m³	< 0.08 µg/m³	-	IS 5182 (Part 11)
Benzo (a) Pyrene (BaP)	ng/m³	< 0.1 ng/m³	-	IS 5182 (Part 12)
Arsenic (as As)	ng/m³	< 0.5 ng/m³	-	**
Nickel (as Ni)	ng/m³	< 2 ng/m³	-	**

ND – Not Detected, BDL – Below Detectable Limit.

Note - As per National Ambient Air Quality Standard dated November 2009, Annual Average of Benzene (as C_6H_6), Benzo (a) Pyrene (BaP), Arsenic (as As) and Nickel (as Ni) are 05, 01, 06 and 20 ng/m³ respectively

* Methods of Air sampling and analysis (Third Edition) – James P. Lodge Jr.

Annexure- 19: MoM on ESMP Consultation & sharing workshop

Minutes of meeting on "Consultation and Sharing Workshop on Environmental and Social Management Plan (ESMP) of West Bengal Major Irrigation and Flood Management Project (WBMIFMP)"

This meeting was held on Friday 16th November 2018 at Coference Hall, 12th Floor of "Subhannya", SGO Complex, Salt Lake City, Kolkata-700064, with the Welcomes Addressed by Mr. Subir kumar Laha, Chief Engineer and Project Director, SPMU-WBMIFMP, IW&D, Government of West Bengal. He welcomed the delegates from IWD, Line departments, Local Self-governance Institute, ESIA & FS consultant, NGOs representatives, Sand mining & construction company, farmers, educational institute. CE&PD has narrated project objectives with background and objective of "Consultation and Sharing Workshop on Environmental and Social Management Plan (ESMP)". ESIA consulting team was asked to present proposed ESMP specially designed for this WBMIFMP project.

Mr. Kader Mirdha (Consultant) on behalf of CTRAN Consulting has presented the project activity specific ESMP through Power Point Presentation with support by Mr. Saroj Nayak (Vice President) of the CTRAN and IWD officials. Mr. Subrata Chottopadhaya (APD- SPMU) has described project activities under Irrigation Management components. Baseline findings of environmental and social features were described elaborately. The house has silently observed anticipated impact due to project intervention and proposed management plan to mitigate adverse environmental & social impacts. Entire presentation and consultation were carried out in local Bengali language.

Table 9: Participants Feedback on the work-shop programme

SN	Name of the Participants	Institution / Organization	Issue Raised	Reply/ Addressed in ESMP
1.	Mr. Rajarshi Chakrabarty	Environmental Officer Environmental Dept., GoWB	He appreciated the proposed ESMP with suggestion to incorporate detail compensatory afforestation plan at 1: 5 ratios against felling of 744 nos. tree with more than 50cm GBH. Afforestation location with suitable species shall be specified in plan. He also enquires about implementation mechanism of afforestation plan.	Responsibility of afforestation is given to implementing contractor. Avenue plantation will be done alongside of earther embankment where there is no PCC block lining. However, contractor will prepare site specific plan in consultation with local people and IWD and engage Forest Dept. for compensatory plantation.
2	Dr. Prakash Pradhan	Research Assistant, West Bengal Bio-diversity Board, GoWB	Suggested to consult with the bio-diversity board for identification of probable impact on flora and fauna community and mitigation measures. He also suggested to promote indegenious trees, crops instead of hybrid crops, trees. The community seeds bank may be incorporated in the project activity plan. During de-siltation of cannel, the fish breeds may be affected, whether the ESMP	Official of Biodiversity board were consulted on 26th October, 2018 at there office located at 5th Floor, Animal Husbandry building. They have suggestes to consider impact on Fishing Cat, Mongoose, Asian Small Clawed Otter, Fresh Water Turtles/Terrapins, Jungle Cat, Jackal, Monitor Lizard, etc., in addition to several species of birds including the White-eyed Pochard.

SN	Name of the Participants	Institution / Organization	Issue Raised	Reply/ Addressed in ESMP
			has provision to address any such impact.	Impact on these endangered/ threattend species are idenfied and mitigation plan is proposed accordingly. Desiltation activities are proposed to be implemented during day time. Vibration arrangement to be made by contractor to allow species to come out from cave and migrate to nearby bush. Mixed plantation with locally grown tree species is proposed for afforestation. Improved varities of locally grown high value crop will be promoted under this project. Developing community seeds bank is not part of this irrigation project. Community seeds bank may be promoted under other project of Agri-marketing department. Desiltation activities will be carried out only during non-monsoon period. However, consultation with Dept. of Fishery has revailed non-presence of any such natural breeding point on Mundeswari river as it remains almost dry even during monsoon period, until the discharge is more than 40,000 cusec.
3	Priya Hazra	Project Associate, WWF India, West Bengal State Office	Possibility of dolphin's seedling in Damodar river during monsoon shall be examined properly. In general, Dolphin gets badly injured during their movement in the sluice gate.	Portion of Mundeswari river where desiltation is prposed remains dry even during monsoon period except water in few pockets. Consultation with Bio-diversity board has not revailed any such possibility of Dolphine in Damodar river. Moreover, dry desiltation will be adopted only during non-monsoon period.
4	Monoj Porel	Project Co-ordinator, Itarai Asha Deep Foundation, NGO-Udaynarayanpur-II	There may be social issues like women trafficking, sexual harassment in the work place during project implementation. Management plan need to consider this such activities in advance.	Workers camp site is proposed atleast 500 meter away from nearny habitation. Contractor will provide seperate toilet facility for women workers. Security guard will be posted at each camp site to restrict movement of local people within camp site.
			One of project blocks in Howrah district has been affected by Arsenic. The safe drinking water facilities shall be provided to all community and workers.	This does not come under perview of project. However, contractor will provided safe drinking water to all of its workers.
5	Rupchand Bera	*Savapati*, Amti-II, Howrah Dist.	Aggrieved village people may not come down to DPMU/ SPMU office each time. He suggested to include Panchayet Samiti and Zila	Bottom level of PRI system i.e Gram Panchayat is given 1st tier responsibility for greavance redressal. This is very common practice in West Bengal.

SN	Name of the Participants	Institution / Organization	Issue Raised	Reply/ Addressed in ESMP
			Parishad as second and third tier of greavance redressal nodal point.	GP member may resolve any greavance in consultation with other PRI members at higher level.
6.	Mr. Sudarshan Gupta	Propitor (Sand Miner), Loknath Estate & Export Pvt Ltd.	In Mundeswari river, layer wise desiltation may be carried out to reduce burden of disposal of desilted material. Sand layer and soil layers may be segregated in this way at source itself. Soil mixed sand material will be used in filling purpose and sand material will be used for construction purpose. He also suggested to disclose phase wise desiltation plan to public in advance.	The CE & PD did not agreeed with layer wise desiltation activity. He further added saying, matter was already discussed during project formulation stage and discurred owing to non techno-economic feasible option. However, matter will further be discussed during meeting with interested bidding contractor. If contractors can come up with feasible techno-economic solution, matter will be considered and included in bidding condition. 5 – 19 km. chainage of Mundeswari River will be desilted in 1st phase and remaining portion in 2nd phase.
7.	Mrs. Salma Murmu	Secretary, *Shibnibas Adivasi Women Development Society* (NGO), Sonamukhi, Bankura	*Adivasi* population leaving in the high land area in Sonamukhi district do not receive sufficient irrigation during non-monsoon period. Farmers of Sonamukhi faces elephant attack on agriculture firm.	Canal resectioning, slope lining and renovation of existing irrigation structures are proposed to improve irrigation facility. Irrigation devision has nothing to do with elephant attack. Matter may be placed before forest department.
8.	Dr. Kamal Alam	Core Support Scientist, Pralit Roy Environment & Education Trust	He critically reviewed the proposed project interventions and appreciates the ESMP.	
9.	Banibrata Hait	Fisherman, Khanakul-II, Hooghly	Portions of earthen embankment are badly affected by Rat. There should be concrete lining of entire embankment.	Entire stretch can't be PCC block lined with available fund. Critically afftected portions are selected for PCC block lining.

Participants list

Consultation and Sharing Workshop on Environmental and Social Impact Assessment (ESIA) and Management Plan of West Bengal Major Irrigation and Flood Management Project (WBMIFMP)

Organised By: SPMU- WBMIFMP, Irrigation & Waterways Department, Govt. of West Bengal
Facilitated By: CTRAN Consulting Limited (www.ctranconsulting.com)

Date: 16th November, 2018 Time: 11:30 AM

Venue: Conference Hall at 12th Floor of "Subhannya", SGO Complex, Salt Lake, Kolkata- 700064, Salt Lake.

10	Tanmoy Kumar Roy					

The Additional District Magistrate and District Land & Land Reforms Officer, Hooghly took the chair and the meeting started. At the onset Executive Engineer, Irrigation brief the details of the project i.e. desiltation or excavation from the Mundeswari River bed. He said that the work of excavation will be conducted in two phases. He further briefed that the work of delineation of the zone of mining in the Mouza Map is being conducted jointly by the team of Irrigation & Land and Land Reforms Department.

In the 1st phase which will take approximate 1(one) year time and will cover region of 12 KM. 35 Lakhs cubic meter of sand (river bed material) will be desilted. This meeting has been necessited for chalking out disposal plan of the materials that will be excavated. The Lessees (sand mining) and the prospective sand miners were given offer to dispose the excavated materials from the project site or from a suitable location that will be decided by the Irrigation and Waterways Department and which will fall within 5(five) KM of the site of excavation.

Contd.....2

The sand miners opined for extraction of bed materials by themselves to segregate the bed materials according to classification and grain size, i.e. either sand or mixture of sand, silt and clay for effective and use. It was opined by the IWD officials that such a condition may affect the work plan and also the specification of the work and therefore, may not be acceptable to the IWD. The preferred option would be to do the excavation by the IWD agencies and transportation of the excavated materials by the sand miners from site. IWD officials assured to address the concerns of the Sand miners, keeping in view the need of ;end use of the excavated materials, to the extent feasible. This proposal of the IWD was finally accepted.

The lease holder and prospective miners were asked to submit formal proposals by Monday i.e. 10.09.2018 in writing. While submitting their willingness, they will cover the following points;-

a) The minimum amount of sand/river bed materials the sand miner will be able to and will dispose monthly.
b) The point or site from which the sand miner will collect the sand and the route they will follow.
c) Infrastructural support that will be required by the sand miner for disposition of the excavated material.
d) Any other note of interrogation.

It was made clear from the chair that as is usual the sand miner will get the sand on pre payment of Royalty & Cess alongwith other contributions as usual in case of mining. The said payment will be realized at the end of BL & LRO concerned.

It was further decided that after receipt of proposals from the sand miners the next course of action will be decided.

The meeting ended thanks from the chair.

Additional District Magistrate &
District Land & Land Reforms Officer, Hooghly

11.09.2018
ADM & DL & LRO,
Hooghly,
Dist-hooghly

Sub: disposal of excavated river bed material of the river mundeswari proposed to be executed in year 2019 dist Hooghly

Ref: 1. Mail dated 04.09.18. Memo No. IX-08/Earth Extr. Mundeswari/4971/MM dated 04.09.18
2. Mail dated 11.09.18. Memo No. IX-08/Earth Extr. Mundeswari/5101/1(3)/MM dated 10.09.18

Respected sir,

As per information received from office of ADM & DL & LRO, HOOGHLY in a meeting held on 05.09.18, the river mundeswari will be excavated in year 2019, covering a span of 19 km, width 150mt and depth 3m.

Lokenath Estate & Export Pvt. Ltd., a private limited company having registered office at 582, D.H.Road, Behala, Kolkata-700034, carrying out business of supplier of building raw material to leading construction and real estate companies like Larsen & Toubro Limited, Simplex Project Limited, Simplex Infrastructure Limited, Ideal real Estate, Diamond group, DTC group, RVNL Metro rail under construction in kolkta and many others , Fly Ash Brick Manufacturing at Aamtala dist:24 Parganas South, Sand minning at Mouza Chandur Dist Hooghly,Sand Minning Mouza Hatsimul, Srirampur, Haripur Dist Purba Bardhaman.

Lokenath Estate & Export Pvt. Ltd. is keenly interested in procuring the job of disposal of river bed material, expecting the plan of material disposal would be for a period of one year approximately and expected quantity of materials 35,00,000 m^3 consisting of sand silt soil pebbles and other materials.

So material to be disposed for filling purpose in a period of 12 months which comes to about 2,91,666m^3/month which would be 9,722m^3/day. Expecting height of stored heap of 5m, daily 1,944m^2 or 0.480 acres of land would be required for stock of materials, and for stock of 30 days land required would be 14 acres or 44 bighas approximately.

In view of the large scale job of disposal of excavated riverbed material, Lokenath Estate & Export Pvt. Ltd. intends to execute the job in association with the following firms:-

a) Excel Movers, having registered office at Village-Masinan ,
P.S- Pursurah, P.O.- Sodepur, Hooghly-712 415, doing business of supplier of building raw Materials, transportation, minning of Sand at Mouza- Chahbense Dist.- Hooghly,
And also sand minning at Mouza- Srirampur, Hatsimul, Dist.- Purba Burdwan.

b) Prasanta Kumar Hait, having registered office at Village- Dehibatpur, P.O.- Alati,
P.S.- Pursurah, Dist.- Hooghly, Pin Code- 712 414, doing business of lifting Sand from River, selling of Sand, drezzing in river, Government Contractor, Sand minning at Mouza- Baikunthapur, Dist.- Hooghly.

c) Uttam Samanta, having registered office at, Village- Masinan, P.S.- Purusrah, P.O.- Sodepur,

Hooghly- 712 415, doing business of transportation, supplier of building raw material and minning sand at Mouza- Narasinhapur, Dist.- Purba Burdwan.

d) Sudarshan Gupta, having registered office at 582, Diamond Harbour Road, Behala,Kolkata- 700 034, doing business of transportation , supplier of building raw materials, Sand minning at Mouza- Becharhat, Srirampur, Hatsimul, Dist.- Purba Burdwan.

In this disposal of river bed material some of the major problems would be dealt with as follows:-

1. Daily around 850 truck load material has to be disposed. Each dumper expecting to do 10 trips, so around 85 trucks will be required. We keeping in mind unforeseen circumstances will be recruiting 120 dumpers from transporters.

2. In order to load dumpers and trucks effectively and smoothly we need loading pokhland. We would ne requiring about 12 pokhlands of model 210 Komatsu. We are already running 6 such machines currently. We have already finalized discussion for recruiting 12 such pokhlands.

3. Land would be required minimum 50 bighas for ease of activities & securities. Land can be made available alongs side the currently passage of following river which are sketch as river in mouza map but over years river has shrunk to much leaser width. Apart from this, land would be acquired by general public at a higher rate even its available beyond the distance of 5km. We have finalized dealing with land owners in adjoining mouzas near mundeswari river excavation site, the details of which are as follows:

MOUZA	BANK	ACRE	BIGHA	DISTANCE (Approx.)
1. MAYAPUR	WEST	21.66	65	5 KM
2. MALAYPUR	WEST	16.33	49	3 KM
3. ALATI	EAST	7.33	22	4 KM
4. DEULPARA	EAST	10.00	30	5 KM
5. BAIKUNTHAPUR	EAST	11.66	35	5 KM
6. SOALUK	EAST	10.00	30	2 KM
7. BACHANARI	WEST	6.00	18	3 KM
8. KESHABPUR	WEST	5.00	15	5 KM
9. ARUNBERA	EAST	7.33	22	4 KM
10. DAKSHIN RASULPUR	WEST	6.00	18	5 KM
11. FATEPUR	WEST	5.00	15	3 KM
12. GOLAMICHAK	EAST	6.66	20	5 KM
		112.97	339	

4. One of the biggest problem would be accessible approach metallic roads to excavated sites along side the river. Such roads will bear the load of 1000 trips of loaded trucks daily which will further damage the road. So road with huge extra strength need to be built by government. Damaged roads to be repaired immediately by government otherwise smooth flow of trucks will be hampered. In case of break down of lorry passage will be block disrupting communication so wider road would be required.

On 05.09.18 at the meeting at office of ADM & DL & LRO, Hooghly, a total of 7 roads were demarcated in mouza map for transportation of riverbed material. We will be using all these roads for transportation of riverbed material. In addition to it, we have identified another approach road to riverbed which is owned privately and have convinced the owners to allow us for transportation of riverbed material. This private road also needs to be developed into metallic road by government for smooth flow of dumpers.

We would be glad to collect material from riverbed itself provided strong approach passage to excavation site is made available to us.

5. If strong 4G internet service can be made available along the path of excavation in riverbed and adjoining 5km region, it would not only help us in smooth disposal of excavated riverbed material but will also help the agency excavating the riverbed. Global Companies that would compete for the tender would be happy to compete for the tender if strong internet facility is available in the zone. It will create a stronghold of the management with real time exploration possible remotely at regional and head offices. Real time exploration will help in faster decision making and fasten the problem solving processes with aid quick aid from officers at regional and head offices during the hectic workload of excavation and disposal of riverbed material.

6. We intend to transport the riverbed material from excavation site to a storage place within 5Km from excavating river. Then we would store the riverbed material at these storage sites until disposed off finally. We also need to pay rent to landowners until riverbed material is disposed. We also need to bear cost of logistics and transportation and other overheads.

So we need to be well aware of money we would be paid by government for transportation of material from riverbed to storage site within 5Km in amount of money per cubic meter of riverbed material transported to storage site, along with terms and conditions of payment. We also need to know the amount of money government would be paying us for disposal of materials from storage sites in amount of money per cubic meter of material disposed along with terms and conditions of payment.

Memo No. IX-08/ Earth Extr. Mundeswari/ 4716 / MM Dated- 17.08.2018

Proceeding of meeting held at the chamber of the Additional District Magistrate and District Land & Land Reforms Officer, Hooghly on 09.08.2018 in connection with utilization of earth of silt to be excavated from Mundeswari River in dredging process in block Jamalpur, District- Purba Bardhaman and block Arambagh and Pursurah, District- Hooghly.

The following members were present in the meeting :

1) ADM & DL & LRO, Hooghly
2) Executive Engineer, Hooghly Irrigation Division
3) Deputy DL & LRO-I, Hooghly
4) Deputy DL & LRO-II, Hooghly
5) Office-in-Charge, M.M. Section
6) Representatives of Brick Field Owners Association

ADM & DL & LRO, Hooghly took the chair and invited discussion. Executive Engineer Hooghly District, Irrigation Department narrated the details before the members of the different Brick Field Owners Association. He explained that huge silt will be removed from the bed of Mundeswari River and same will be deposited in selected places within 0-5 KM distance from the both banks of river. Some selected roads will be developed for frequent to and fro movement of trucks which also may be used by brick field owner, for plying and loading their trucks. After narrating in details Executive Engineer invited Brick Field Association members to inform him the approximate number of brick fields interested to collect the silt, total yearly requirement of earth by them so that an assessment of their tentative need of earth be made.

On the other hand, members of the Brick Field Owners Association clarified that they are in dire need of brick earth and they are agreed to fetch the excavated earth if that earth be suitable for manufacture of bricks and contain less proportion of sand. They expressed the need of testing the suitability of the soil for brick manufacturing by way of boring in at least three places within the project area. After that they would be able to give tentative estimation of the earth to be consumed by the brick field.

Executive Engineer agreed to hold the boring from their end in presence of the Brick Field Owners Association members so that the issue may be amicably settled.

ADM & DL & LRO, Hooghly requested both the Executive Engineer and the members of the Brick Field Owners Association to settle the issue at the earliest possible. ADM & DL & LRO, Hooghly also requested the Executive Engineer to provide the copy of the map of respective area of excavation and connecting roads therein and also a copy of the report relating to soil testing after boring.

As there is no further issue to discuss the meeting ended with thanks to and from the Chair.

Additional District Magistrate &
District Land & Land Reforms Officer, Hooghly

Annexure- 22: List of Activity Require Regulatory Clearance

Contractor as well as owner has to obtain certain kind of prior permission for different activity to be carried out during project implementation. List of activity for which permission need to be obtained from different govt agency are listed below

Table 10: Regulatory clearance to be obtained before commencement of different activity

Sl. No.	Clearance Required	Applicable Regulation	Issuing Authority	Requirement	Responsibility
1	Consent to Establish (CtE) and Operate (CtO)	Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981	WBSPCB	Consent shall be obtained before commencement of construction work for the plant and machinery (Hot Mix, WMM, Batching, Crusher, and Diesel Generator greater than 15 KVA) required for the project.	Contractor
2	Tree Cutting	West Bengal Trees (Protection and Conservation in Non-Forest Areas) Act, 2006 and Rules, 2007	State Forest Department (State DFO)	Permission shall be obtained before felling of tree.	Respective DPMU
3	Establishment of Camp		Local GP or authority	Permission for establishing labour camps	Contractor
4	Storing and dumping of waste materil		Local GP or authority	Temporary storing or dumping of waste material (C&D waste, Desilted material)	Contractor
5	Pollution Under Control Certificate	Motor Vehicles Act, 1988	State Transport Authority	Vehicles and machineries shall comply with the Motors Vehicle act and submit pollution under control (PUC) certificate	Contractor

Annexure- 23: Parameters for Air, Surface & Ground Water, Soil quality Monitoring during Project Implementation

Inland Surface Water (Class C)		**Ground Water**		**Ambient Air Quality (AAQ)**		**Soil Quality Testing**	
(IS: 2296-1982)		(BIS 10500 : 1991)		(NAAQS)- 2009

Ltd.	Drawn By: B. Das Checked By: S. Mukherjee Approved By: R. Chakraborty	Scale: 0 2.5 5 10 15 20Km	Drawing Title:- Proposed Stabilization of Slope	Drawing No.: EIPL/MAP/DFSR/07	Date: July-2018 Revised R0

Annexure- 25 (a): Format for Monthly & Quarterly E&S Monitoring Report on ESMP Implementation

(To be filled by separately by 1) Contractor (monthly) and 2) the Jr. Environmental and Social Safeguard Specialist at DPMU level (Quarterly)

Monthly/ Quarterly Report **Reporting Period: ……..**

I. Package Description

1.1	Contract Package	
1.2	Name of the Contractor	
1.3	Name of the project component and activity	
1.4	Work Completed for the Month	Earth work/ Concrete work/ Masonry / Flood Wall/ PCC lining
		Others Specify….

II. Establishment of Contractors Camp - Yes / No

1 **Usage of Camp -** Plant / Machines/ Labour

1.1 If Plant - Crusher unit/ HMP/ WMM / Any Other

1.2 If Machinery stocking - Yes / No

Sl.N0	**Type of Machinery in Operation**	**Number**	**Fitness/ PCB certificate obtained**	**Remarks – Repaired at camp / sent to Garage**
1	Paver			
2	Rollers			
3	Excavators			
4	Dumpers			
5	Vehicles (Tractors/ Trucks)			
6	Others (mention)			
7				
8				
9				
10				
11				

1.3 Labour - Permanent / Transit

S.No	**Particulars**	**Remarks**		
i	Total Number of Labourers employed?	ST :	SC:	Others:
ii	Number of Male labourers?	ST :	SC:	Others:
iii	Number of female labourers?	ST :	SC:	Others:
iv	Number of local labourers?	ST :	SC:	Others:
v	Name the village from where the labour comes from?			
vi	Number of migrant labourers?			
vii	Number of dwelling units in the camp?			

viii	Type of dwellings?	Pucca : _____Number Kutcha : _____Number
ix	Water Supply provided?	
x	Drinking water supply provided?	Tube well/ Open Well/ Tanker/ supply water etc
xi	Number of Toilets provided?	
xii	Type of Toilet?	Leach pit / Soak Pit / Septic tank
xii	Number of Bath rooms provided?	
xiii	Separate Bath rooms provided for women?	Yes / No
xiv	Washing platforms provided?	
xv	Drainage facility provided?	
xvi	Crèche facility provided?	
xvii	Availability of Health centre?	Nearest
xviii	First Aid Facility Available?	
xix	Health Camp / HIV awareness conducted?	Yes / No If yes provide details
xx	Fuel used in the Camp?	Fire wood/ Kerosene/ LPG
xxi	Does the Camp have Workshop for Repair?	Yes / No
xxii	Any Oil Spill taking Place?	Yes / No
xxiii	Oil / Grease traps / solid plat forms provided?	Yes / No

1.4.1 Storage of Fuel — Temporary/ Permanent
1.4.2 Type of Fuel Stored? — HSD/ Petrol
1.4.3 License Obtained? — Yes/ NO
1.6 Any Blasting Material Stored? — Yes/ NO
1.6.1 License Obtained ? — Yes/ NO

III. Haulage Road — **Existing Road/ Temp Road Created**
1. Maintenance of Haulage Road done? — Yes / No
2. Dust Suppression Measures taken? — Yes / No

IV. Quarries Under Operation — Yes / No
1. If Yes, Number of Quarries in Use and locations?
2. If No, Name of Vendor, from whom the material Purchased (SPCB Certificate of Vendor to be enclosed)
3. Are the Vehicles used for Supplying material were covered ? Yes / No

V. Erosion Control Measures: — Silt Traps/ Construction in Lean Season / Compaction Taken up

VI. Dump Sites: — Identified - Yes / No
Low lying areas Used - Yes/ No
Disposal Sites – identified - Yes/ No

VIII. Storage of Material: — Adj . to Canal / ROW/ Agri. Land / etc.
1. **Blockage of Natural drains** — Yes / No

IX. Dust Control Measure:

S.No.	Measure	Remarks
1	Dust control devices are available	Yes/ No
2	Sprinkling of water carried out.	Yes/ No

3	Cover on the vehicles	Yes/ No
4	Cover on stack materials	Yes/ No

X. Noise Control Measure:

S.No.	Measure	Remarks
1	Machines establishes in Habitation	Yes / No
2	Away from Habitations	Yes / No
3	Machines Sent for Maintenance regularly	Yes / No

XI. Safety Measures Taken:

S.No.	Measure	Remarks
1	Whether first aid post established at site?	Yes/No
2	Whether safety helmets given to all workmen at site?	Yes/No
3	Whether safety belts / ribbons used at work site	Yes/No
4	Whether gum boots, tarring unfits, spectacles etc. given to person handling bitumen?	Yes/No

XII. Environmental Monitoring Details

Sl.No	Type of Test	Number of Locations	Date of Test (last conducted)	Remarks
1	Air Quality			
2	Noise Quality			
3	Ground Water			
4	Surface Water			
5	Soil/ Silt			

Signature of the Contractor/ Sr. Environmental Specialist **Signature of the PD**
Name of the Specialist **Name of the PD**
Date **Date Verified**

Environmental & Social Management Plan (EMP) Implementation Data

(To be filled by separately by 1) Contractor (monthly) and 2) the Jr. Environmental and Social Safeguard Specialist at DPMU level (Quarterly)

1. Details of Statutory Clearance

No	Name of the project component and activity	Name of the Contract Package	Date of Agreement	Date of Completion	Date of Commencement of Civil work	Permission from State Forest Dept*	Labour License Details Validity*		Insurance undertaken validity*	
							From	To	From	To

(Note: * Attach relevant papers)

2. Details of Quarries / Vendors

No	Name of the project component and activity	Name of the Contract Package	Quarries Established (YES/ NO)	Name of Vendors	Details of Vendors Environmental Clearances Validity*					
					Sand		Stone Products		Boulders	
					From	To	From	To	From	To

Annexure- 25 (b): Format for SPMU's Half Yearly E&S Management Monitoring Report

(This format will also be used for Mid-term and End-term Audit)

Chapter I: Project Background:

1.1 Project Overview and Contextual Relevance
1.2 Project Development Objectives
1.3 Project Components and Activities
1.4 Environmental Management Framework
1.5 Social Management Framework

Chapter II: Regulatory Requirement and Compliances

2.1 Environmental Regulatory Requirements and Compliances (Project Specific)

2.1.1 Consent to Establish and Consent to Operate under Air & Water Pollution
2.1.2 Letter of Authorization for handling hazardous Waste (if applicable)
2.1.3 Tree cutting permission from DFO
2.1.5 Clearance for Disposal of Dredged materials from WBPCB
2.1.6 Agreement letter with Pvt. Land owner for borrowing earth (if required)
2.1.7 GP Clearance for establishment of Labour Camp and Temporary Disposal of Waste aterial
2.1.8 PUC Compliance / Certificate from RTO
2.1.9 Authorization / Permission of Material Supplier
2.1.10 Any other compliances that are required

2.2 Social Regulatory Requirements and Compliances

2.2.1 SIA Notification (if land acquisition is involved)
2.2.2 Notification for Land Acquisition (as per LARR Act), if any
2.2.3 Labour License
2.2.4 Any other compliances that are required

Chapter III: Environmental Performance

3.1 Soil Pollution
3.2 Water Pollution
3.3 Noise Pollution
3.4 Waste Management / Sediment Disposal & Management
3.5 Pest Management
3.6 Management of Flora and Fauna / Local Bio-diversity
3.7 Physical Cultural Resources, its Protection and Management

Chapter IV: Social Performance

4.1 People's Understanding and Awareness of the Project
4.2 Land Acquisition, Rehabilitation and Resettlement (if required)
4.3 Gender Inclusion
4.4 Tribal Inclusion and Safeguards
4.5 Project Impact on Vulnerable Groups
4.6 Safety and Security of Workers

Chapter V: Monitoring and Supervision

5.1 Monitoring of Environmental Parameters and Measures Taken
5.2 Monitoring of Social Parameters and Measures Taken

Chapter VI: Information Disclosure, Consultation, and Participation

Chapter VII: Grievance Redress Mechanism (GRM)

Chapter VIII: Conclusions and recommendations

Annexure I: List of Documents Reviewed and Verified

Annexure II: List of Project Sites Visited and Consultations

Annexure- 26: Terms of Reference (ToR) for Position of Environmental Expert at SPMU and DPMU

Annexure- 26.A ToR for Senior Environmental Specialist

Position: Senior Environmental Specialist
No. of Position: One

Project Description:

To improve the existing irrigation network, optimizing conjunctive and sustainable use of ground and surface water across in the project area and throughout the year, and to reduce flooding The Government of West Bengal (GoWB) has proposed "West Bengal Major Irrigation and Flood Management Project (WBMIFMP)". The Government of West Bengal (GoWB) has applied for USD 290 million financing from the International Bank for Reconstruction and Development (IBRD) and from the Asian Infrastructure Investment Bank (AIIB) towards the cost of the WBMIFMP.

The project aims at modernization of irrigation system, with special emphasis on conjunctive use of ground and surface water in the Damodar Valley Project Command Area of the State, in the districts of Purba & Paschim Burdwan, Bankura, Hooghly and Howrah and improvement of flood management infrastructure in Lower Damodar Sub-basin, mainly in the districts of Hooghly and Howrah. Prime objective of proposed project is to rejuvenate and rehabilitate existing irrigation network for sustainable development in DVC area and management of floods in Lower Damodar Sub-Basin in West Bengal. Proposed project has mainly four broader objectives namely 1) *Irrigation Modernization, 2) Irrigation Management, 3) Flood Management and 4) Crop Diversification.* Project will also promote conjunctive use of surface and ground water for agriculture. The expected results of the project are to improve irrigation in order to benefit agriculture in the DVCA, and to reduce annual flooding in the Lower Damodar sub-basin area.

Project Duration:

The project duration is for five years.

Project Area:

The project will be implemented in selected locations five districts of West Bengal, namely East & West Bardhaman, Bankura, Hooghly and Howrah.

Scope for Senior Environmental Specialist:

Senior environmental expert will be responsible for providing input and guidance on implementation of environmental management and safeguards to the contractor, DPIU and DPMU/ SPMU and assisting in building environmental management capacity of SPMU, DPMU, DPIU, line departments - Department of Food Processing Industries and Horticulture, Agriculture Marketing Dept., Agriculture Dept. and Fisheries Department.

Specific focus of the assignment

Specifically, the Senior Environmental Specialist will:

(i) Ensure the necessary national environmental approvals are obtained in a timely manner to advance project implementation;
(ii) Review of site specific management plan prepared by contractor;
(iii) Prepare site specific environmental performance criteria;

(iv) Monitor the update and implementation of project activity specific 'ESMPs;
(v) Monitor routine environmental monitoring activities as defined in Environmental and Social Monitoring Plan;
(vi) Monitor project activity sites against any unexpected environmental impacts;
(vii) Advise Contractor, SPMU, DPMU on environment problems and/ or requirements, and recommend mitigating measures;
(viii) Prepare environmental monitoring reports on ESMP implementation and compliance and submit it to the World Bank;
(ix) Take part in project performance monitoring and evaluation activities; and
(x) Assess and prepare capacity building program on environmental issues at the SPMU, DPMU, DPIU, line departments - Department of Food Processing Industries and Horticulture, Agriculture Marketing Dept., Agriculture Dept. and Fisheries Department.
(xi) Arrange and participate in safeguard review missions by the World Bank and AIIB.
(xii) Liaise with the West Bengal State Pollution Control Board, Biodiversity Board, all line departments on project-related environmental issues;

Professional Profile:

1. Master degree in environmental science/ management.
2. Minimum 15 years of professional experience of working in assessing environmental impact and monitoring environment safeguards.
3. Familiarity with the World Bank's, ADB's, IFC's environmental guidelines is preferred.
4. Experience in similar irrigation projects and geographic areas are an added advantage.
5. Proficiency in both written and spoken English, and knowledge of locally spoken language - Bengali are an advantage
6. Experience of working in rural areas and willingness to travel to project areas / locations;
7. Knowledge on Project Management principles;
8. Efficiency in computer Knowledge;
9. Having proficient communication Skill in English, including preparation of reports, documents, IEC materials etc. in English;
10. Prior experience of working in similar projects will be an added advantage.

Age Limit:
Maximum age limit is 45 years;

Reporting:
The Specialist would report to the Project Director or any person designated as Reporting Authority by the Project Director, WBMIFMP on monthly, quarterly and annual basis.

Work Station:
The Specialist would be based in the WBMIFMP Project office at the State Headquarters and would make at least 10 field visits or field visits as per the requirement in every month to project sites. However, if so wished and found necessary by the Project Director, she / he may be placed at the DPMU level for required period of time, to be specified by the SPMU of WBMIFMP.

Duration of Engagement:
The Specialist would be engaged initially for a period of 1 year on full time and contractual basis.The engagement period may be extended subject to satisfactory performance and mutual consent of the SPMU-WBMIFMP and the Specialist, not exceeding the project period.

Annexure- 26.B ToR for Environmental Specialist

Position: Environmental Specialist (Jurior)
No. of Position:

Project Description:

To improve the existing irrigation network, optimizing conjunctive and sustainable use of ground and surface water across in the project area and throughout the year, and to reduce flooding The Government of West Bengal (GoWB) has proposed "West Bengal Major Irrigation and Flood Management Project (WBMIFMP)". Age Limit:
Maximum age limit is 35 years;

Reporting:
The Specialist would report to the Additional Project Director (APD) at the District Project Management Unit (DPMU) level or any person designated as Reporting Authority by the APD-DPMU, WBMIFMP on monthly, quarterly and annual basis.

Work Station:
The Specialist would be based at the DPMU of WBMIFMP Project office at the District Headquarters and would make at least 15 field visits or field visits as per the requirement in every month to project sites. However, if so wished and found necessary by the APD, she / he may be placed at the DPIU level for required period of time, to be specified by the DPMU of WBMIFMP.

Duration of Engagement:
The Specialist would be engaged initially for a period of 1 year on full time and contractual basis.The engagement period may be extended subject to satisfactory performance and mutual consent of the DPMU / SPMU-WBMIFMP and the Specialist, not exceeding the project period.

Annexure- 26.C ToR for Senior Social Cum Gender Development Specialist

Position: Senior Social cum Gender Development Specialist
No. of Position: One

Project Description:
To improve the existing irrigation network, optimizing conjunctive and sustainable use of ground and surface water across in the project area and throughout the year, and to reduce flooding The Government of West Bengal (GoWB) has proposed "West Bengal Major Irrigation and Flood Management Project (WBMIFMP)". The Government of West Bengal (GoWB) has applied for USD 290 million financing from the International Bank for Reconstruction and Development (IBRD) and from the Asian Infrastructure Investment Bank (AIIB) towards the cost of the WBMIFMP.

The project aims at modernization of irrigation system, with special emphasis on conjunctive use of ground and surface water in the Damodar Valley Project Command Area of the State, in the districts of Purba & Paschim Burdwan, Bankura, Hooghly and Howrah and improvement of flood management infrastructure in Lower Damodar Sub-basin, mainly in the districts of Hooghly and Howrah. Prime objective of proposed project is to rejuvenate and rehabilitate existing irrigation network for sustainable development in DVC area and management of floods in Lower Damodar Sub-Basin in West Bengal. Proposed project has mainly four broader objectives namely 1) *Irrigation Modernization, 2) Irrigation Management, 3) Flood Management and 4) Crop Diversification.* Project will also promote conjunctive use of surface and ground water for agriculture. The expected results of the project are to improve irrigation in order to benefit agriculture in the DVCA, and to reduce annual flooding in the Lower Damodar sub-basin area.

Project Duration:
The project duration is for five years.

Project Area:
The project will be implemented in selected locations five districts of West Bengal, namely Purba& Paschim Bardhaman, Bankura, Hooghly and Howrah.

Need for Social cum Gender Development Specialist:
The Social Cum Gender Development Specialist will be primarily responsible for developing necessary strategy to ensure that the project is achieving its social development objective i.e. equity, inclusiveness and transparency by institutionalizing participatory process. The specialist will guide, mentor, monitor and evaluate the functioning and performance of social mobilization work, establishing systems to achieve the social development objectives of the project and work closely with environment expert and other key stakeholders of the project. One of the prime role of the specialist would be to ensure execution of social safeguards as per the Environment and Social Management Framework (ESMF) / Environment and Social Impact Assessment (ESIA).

Scope of Work:

1. Guide the project stakeholders and facilitatecollection and analysis of social, cultural and economic information that are relevant to the project and in line with the ESMF / EIA requirements;

2. Support in institutionalising the social safeguard parameters, as per ESMF / EIA in project framed activities;

3. Conduct periodic field visits and consult / discuss with the local community organisations / associations of farmers and related other stakeholders, as identified in the project;

4. Discuss with contractors and associated Govt. Departments from time to time to ensure that gender balance and inclusive approach is adopted in project activities;

5. Facilitate in increasing participation of women in construction and other project activities;

6. Coordinate, organise and impart training on social safeguard measures to be taken for different category of stakeholders;

7. Prepare, design and conduct workshop/seminar for the project staff and other stakeholders on social development aspects, mapping of indicators and appraising the learning cases;

8. Facilitate collection of gender disaggregated data and conduct analyse of project benefits by social, economic and sex (male / female) categories;

9. Facilitate documentation of learning cases with regard to social safeguard measures / practices and its wider dissemination;

10. Preparation of leaflets / pamphlets / IEC materials for sensitisation of stakeholders and community on the project benefits and its socio-economic dimensions;

11. Conduct period review meetings with the stakeholders, including Government Departments to ensure gender inclusion and equity aspects of project activities along with key achievements as per the social indicators.

12. Conducting internal monitoring and evaluation of project activities and mapping the progress in line with the social indicators.

13. Collate the internal monitoring reports for M&E of the project and preparing internal monitoring reports, covering social management aspects of the project;

14. Periodic appraisal of progress in line with the social safeguard to the project director;

15. Carrying out other activities as assigned by the PD-SPMU or designated person of SPMU.

Professional Profile:

21. Master's degree in Sociology/Anthropology/ Social work.

22. At least 15 years of professional experience of working in related field of rural development programme/ Irrigation Improvement Project of Govt. or Non-government organization.

23. Fluency in English and workable knowledge of Bengali is an added advantage;

24. Experience of working in rural areas and willingness to travel to project areas / locations;

25. Knowledge on Project Management principles;

26. Efficiency in computer Knowledge;

27. Having proficient Communication Skill in English, including preparation of reports, documents, IEC materials etc. in English;

28. Prior experience of working in similar projects will be an added advantage.

Age Limit:
Maximum age limit is 55 years;

Reporting:

The Specialist would report to the Project Director or any person designated as Reporting Authority by the Project Director, WBMIFMP on monthly, quarterly and annual basis.

Work Station:
The Specialist would be based in the WBMIFMP Project office at the State Headquarters and would make at least 10 field visits or field visits as per the requirement in every month to project sites. However, if so wished and found necessary by the Project Director, she / he may be placed at the DPMU level for required period of time, to be specified by the SPMU of WBMIFMP.

Duration of Engagement:
The Specialist would be engaged initially for a period of 1 year on full time and contractual basis.The engagement period may be extended subject to satisfactory performance and mutual consent of the SPMU-WBMIFMP and the Specialist, not exceeding the project period.

Annexure- 26.D ToR for Social Cum Gender Development Specialist

Position: Social (Juniou) cum Gender Development Specialist
No. of Position: Two

Project Description:
To improve the existing irrigation network, optimizing conjunctive and sustainable use of ground and surface water across in the project area and throughout the year, and to reduce flooding The Government of West Bengal (GoWB) has proposed "West Bengal Major Irrigation and Flood Management Project (WBMIFMP)". The Government of West Bengal (GoWB) has applied for USD 290 million financing from the International Bank for Reconstruction and Development (IBRD) and from the Asian Infrastructure Investment Bank (AIIB) towards the cost of the WBMIFMP.

The project aims at modernization of irrigation system, with special emphasis on conjunctive use of ground and surface water in the Damodar Valley Project Command Area of the State, in the districts of Purba & Paschim Burdwan, Bankura, Hooghly and Howrah and improvement of flood management infrastructure in Lower Damodar Sub-basin, mainly in the districts of Hooghly and Howrah. Prime objective of proposed project is to rejuvenate and rehabilitate existing irrigation network for sustainable development in DVC area and management of floods in Lower Damodar Sub-Basin in West Bengal. Proposed project has mainly four broader objectives namely 1) *Irrigation Modernization, 2) Irrigation Management, 3) Flood Management and 4) Crop Diversification.* Project will also promote conjunctive use of surface and ground water for agriculture. The expected results of the project are to improve irrigation in order to benefit agriculture in the DVCA, and to reduce annual flooding in the Lower Damodar sub-basin area.

Project Duration:
The project duration is for five years.

Project Area:
The project will be implemented in selected locations five districts of West Bengal, namely Purba& Paschim Bardhaman, Bankura, Hooghly and Howrah.

Need for Social cum Gender Development Specialist:

10. Preparation of leaflets / pamphlets / IEC materials in Bengali for sensitisation of stakeholders and community on the project benefits and its socio-economic dimensions;

11. Conduct period review meetings with the stakeholders, including Government Departments to ensure gender inclusion and equity aspects of project activities along with key achievements as per the social indicators.

12. Conducting internal monitoring of project activities and mapping the progress in line with the social indicators.

13. Periodic appraisal of progress in line with the social safeguard to the APD-DPMU and Senior Social Cum Gender Development Specialist of the SPMU;

14. Carryng out other activities as assigned by the APD-DPMU and Senior Specialist of SPMU.

Professional Profile:

1. Master's degree in Sociology/Anthropology/ Social work.

2. At least 7 years of professional experience of working in related field of rural development programme/ Irrigation Improvement Project of Govt. or Non-government organization.

3. Fluency in Bengali and English;

4. Experience of working in rural areas and willingness to travel to project areas / locations;

5. Knowledge on Project Management principles;

6. Efficiency in computer Knowledge;

7. Having proficient Communication Skill, including preparation of reports, documents etc. in Bengali and English;

8. Prior experience of working in similar projects will be an added advantage.

Age Limit:
Maximum age limit is 40 years;

Reporting:

The Specialist would report to the Additional Project Director (APD) at the District Project Management Unit (DPMU) level or any person designated as Reporting Authority by the APD-DPMU, WBMIFMP on monthly, quarterly and annual basis.

Work Station:
The Specialist would be based at the DPMU of WBMIFMP Project office at the District Headquarters and would make at least 15 field visits or field visits as per the requirement in every month to project sites. However, if so wished and found necessary by the APD, she / he may be placed at the DPIU level for required period of time, to be specified by the DPMU of WBMIFMP.

Duration of Engagement:
The Specialist would be engaged initially for a period of 1 year on full time and contractual basis.The engagement period may be extended subject to satisfactory performance and mutual consent of the DPMU / SPMU-WBMIFMP and the Specialist, not exceeding the project period.

Annexure- 27: Guidance on Chance Find Procedures

(To be annexed to the EMP for All Construction and Dredging Works)

1. PCR Definition

Physical Cultural Resources (PCR) refer to: "movable or immovable objects, sites, structures or groups of structures having archaeological, paleontological, historical, architectural, religious, aesthetic, or other cultural significance".

.

2. Procedure upon Discovery

Suspension of Work

If a PCR comes to light during the execution of the works, the contractor shall stop the works. After stopping work, the contractor must immediately report the discovery to the respective APD (III or IV) at DPMU level. The contractor may not be entitled to claim compensation for work suspension during this period. The Resident Engineer may be entitled to suspend work and to request from the contractor some excavations at the contractor's expense if he thinks that a discovery was made and not reported.

Respective APD (III or IV) at DPMU level immediately inform PD at SPMU level regarding the discover. Depending on the magnitude of the PCR, PD at SPMU level should check with the Archaeological Survey of India (ASI) for advice on whether *all works* should be stopped, or only the works immediately involved in the discovery, or, in some cases where large buried structures may be expected, all works may be stopped within a specified distance (for example, 50 meters) of the discovery.

Demarcation of the Discovery Site

With the approval of the respective APD (III or IV) at DPMU level, the contractor is then required to temporarily demarcate, and limit access to, the site.

Non-Suspension of Work

The PD in consultation with the ASI will decide whether the PCR can be removed for the work to continue, for example in cases where the find is one coin.

Chance Find Report

The contractor should then, at the request of the respective APD (III or IV) at DPMU level, and within 7 days, make a *Chance Find Report*, recording:

- Date and time of discovery;
- Location of the discovery;
- Description of the PCR;
- Photo documentation of the PCR;
- Estimated weight and dimensions of the PCR;
- Temporary protection implemented.

The Chance Find Report should be submitted to the PD, ASI and other concerned parties as agreed with the ASI, and in accordance with national legislation. The PD is required to inform the ASI accordingly.

Arrival and Actions of Cultural Authority

The ASI will be requested to arrive at the discovery site within 24 hours, and determine the action to be taken. Such actions may include, but not be limited to:

- Removal of PCR deemed to be of significance;
- Execution of further excavation within a specified distance of the discovery point;
- Extension or reduction of the area demarcated by the contractor.

These actions should be taken within 5 days. The contractor may or may not be entitled to claim compensation for work suspension during this period.

If the ASI fails to arrive within the stipulated period, the PD may have the authority to extend the period by a further stipulated time. If the ASI fails to arrive after the extension period, the PD may have the authority to instruct the contractor to remove the PCR or undertake other mitigating measures and resume work. Such additional works can be charged to the contract. However, the contractor may not be entitled to claim compensation for work suspension during this period.

Further Suspension of Work

During this 5 day period, the ASI may be entitled to request the temporary suspension of the work at or in the vicinity of the discovery site for an additional period of up to, 15 days. The contractor may, or may not be, entitled to claim compensation for work suspension during this period.

Annexure- 28: ESMP Implementation Monitoring Plan by Project Activities

Annexure- 28(a) ESMP Implementation Monitoring Plan for Irrigation Modernization

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
B.1 & B.2 (common activity)					
I. Restoration of Carrying Capacity of Main, Branch and Distributaries canals (B.1) **I. Restoration of carrying capacity (Earth work for re-sectioning) of other Minor/ Sub-minor (LVL 4) – (B.2)**					
Top soil exposure due to denudation leading to soil erosion	The clearing of vegetation in sections will ensure only areas of the land to be developed at a particular time are exposed to agents of erosion. This will also ensure the cleared areas of the land are not left bare over long periods as development at the cleared areas will be carried out immediately. This will minimize erosion at the project site.	No. of tree species with more than 50 GBH cleared in different phases and area restored; Quantum of earth (Cum) generated, percentage utilised and disposed-off. Denuded area covered under plantation after construction (% of area) Water quality in the working zone and deviations from the standards / baseline in different periods.	Physical Verification of Site; Report of the Contractor; Water Quality Report	DPIU	Weekly
Impact on flora/ fauna during weed cleaning operation	Contractor shall take reasonable precaution to prevent his workers from damaging any flora or fauna of the area specially during vegetation clearance. Vegetation clearance shall be limited to portions of the canal to be excavated at a particular time. The entire land will not be cleared at a time and this will allow any fauna to migrate to adjoining areas.	Quantum of weeds generated, its use and disposal Quantum of water hyacinths along with weeds converted to manure	Physical Verification of Site; Report of the Contractor; Consultation with locals Physical verification of composting site/s	DPIU	Weekly
Organic pollution due to improper dumping of removed aquatic weeds (mostly water hyacinth) leading to unhygienic conditions, inconvenience to local commuters, odour, etc	The management and disposal of this waste will be as follows (details are provided in the ESMP for waste management): Local community will be allowed to use the weeds for domestic use such as using it as fuel (shrub stem, root), animal fodder or for composting. Identification of temporary storage locations for drying and temporary storage of the aquatic weed waste in consultation with the IWD site engineers and the local government authority. The locations will not be within	Usages of weeds along with hyacinths	Physical verification of site; Consultation with local community; Review of quarterly report by contractor;	DPIU	Weekly

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	100 m of the identified Sensitive Receptors (listed in Table 36 under Section 4.16).				
	The Contract Package ESMP and Contractor's ESMP will list and provide map of the identified locations.				
	Temporary storage of the aquatic weed waste at identified locations for a period not exceeding 10 days.				
	Sale or free lifting of dry/semi-dry aquatic weed waste for onward processing into compost, ropes (for handicrafts and furniture making), fodder, etc. The Contract Package ESMP and Contractor's ESMP will provide details of quantity to be disposed in this way along with details of interested parties.				
	The following Dos and Don'ts are to be followed for management of aquatic weed waste:				
	• The aquatic weed waste will not be stored at unauthorized locations. • Burning of aquatic weed waste is not to be undertaken. • Dumping of aquatic weed waste at unauthorized locations is not to be undertaken. • In case on onward sale of the aquatic weed waste, the sale agreement will include prohibition of environmentally harmful practices (open burning of semi-wet waste, dumping of waste residues in unauthorized locations including water bodies, etc.).				
Air Pollution due to Burning of weeds	Contractor shall not adopt practice of burning weeds; Discouraging local community in burning of weeds;	Air quality in the work site and aberration from standards. Usages of weeds along with hyacinths	Air quality report; Consultation with local people / workers Review of quarterly report by contractor;	DPIU	Weekly
Flooding of nearby agricultural field during dewatering before re-sectioning	Most of the restoration work will be carried out when the canal bed is dry. Else, earthen bund shall be constructed for dewatering of active work zone; Canal water shall not be pumped out for dewatering purpose to nearby agricultural field to avoid any kind of crop damage as well as agricultural land pollution (although probability of land/ soil pollution is very low; as this water is being used for irrigation purpose).	No. of resectioning sites where dewatering is done; Crop area and type affected due to dewatering; Crop compensation paid to affected farmers.	Site inspection / visit; Consultation with farmer having land adjoining to work site Review of quarterly report by contractor;	DPMU	Weekly

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	Crop compensation shall be paid to affected farmers on occurrence of crop damage due to dewatering.				
Crop damage due to interrupted irrigation supply	Contractor shall submit work plan with canal closure timeline for each restoration site to DPMU at least before 45 days of any crop season; Restoration plan shall not be approved by DPMU, if not submitted at least 45 days prior to any crop season; Subsequent to receive and approve of work plan, farmers should be informed about canal closure plan at-least before 30 days of any crop season. Canal closure notice board shall be displayed at local panchayat/ irrigation/ fishery and BDO office.	Submission & approval of canal closure plan; Dissemination of canal closure plan	Review of canal closure plan Consultation with farmer having land adjoining to work site Review of quarterly report by contractor;	DPMU	Before each crop season
Sediment transport in downstream canal water leading to increased TDS and turbidity	All earther bund constructed for dewatering purpose shall be removed and entire work zone shall be levelled properly before monsoon period to maintain natural canal flow, minimize soil and sediment transportation to downstream and water pollution. Immediate collection and clearance of excess muck/soil from canal bed to minimize the erosion potential and sediment transportation into canal water which may cause increased water turbidity or TDS;	Removal of earthen bund; clearing and levelling of work zone; Amount of muck / silt generated, reused and disposed-off; Downstream and upstream water quality;	Site inspection / visit; Review of quarterly report by contractor; Analysis of water quality report	DPMU	Weekly (specially before monsoon) Quarterly
Stripping, stocking of generated earth on agricultural field may damage top soil of agricultural field	Formulate and submit site specific temporary storing and reuse plan for generated earth material from re-sectioning.	Quantity of material generated, reused and disposed;	Review of plan/s;	SPMU	Weekly
	Identification of temporary storage locations for the generated earth material in consultation with the IWD site engineers and the local government authority. The Contract Package ESMP and Contractor's ESMP will list and provide map of the identified locations. Temporary storage of the generated earth material at the identified locations for a period not exceeding 30 days. Muck may be stored on either side of embankment / canal bank and Government land along canal bank for temporary period; Storing of excavated material on nearby agricultural field shall be avoided to the extent possible;	Agricultural land (area in Ha.) affected due to stocking of materials; Provision of availability of alternative way, where ever required; Crop compensation paid	Physical observation; Consultation with affected farmers Report on amount of material excavated, used, dumped;	DPMU	Weekly

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	Generated earth material shall not be stored or dumped in unauthorized locations including water bodies and wetlands.				
	Available private land may be used for temporary stocking after discussion and willingness of the land owner;				
	The land owner will be paid compensation for the period of use of land;				
	Land should be restored to its previous condition after lifting excavated materials;				
	Bund shall be provided around storage area of muck to restrict littering and leaching.				
	Entire soil material shall be re-used for on-site and off-site works (such as canal backfilling, lining, levelling, embankment raising & strengthening, construction of temporary diversion road, filling and levelling of access road) that require soil/ earth to the extent possible. Entire muck shall be reused before monsoon season;				
	Safe temporary access routes / by-pass route will be provided for community members to access their farms during the canal re-sectioning period, if no alternative is available.				
Dust and air pollution from flying of dried up earth generated from re-sectioning work	Regular water sprinkling arrangement on desilted material specially during hot-summer season to maintain soil moisture and minimise dust pollution;	Arrangement of water sprinkling; Tarpaulin lining during transportation; Air quality near to the site and at habitation areas;	Site inspection; Community consultation	DPIU/ DPMU	Weekly
	All truck shall be tarpaulin covered while transporting desilted material; At canal stretches in proximity of sensitive receptors, the following additional mitigation measures will be implemented: The Contract Package ESMPs and Contractors ESMPs will specify the list of sensitive receptors. (the list of sensitive receptors – educational institutions, healthcare institutions and etc. are provided in Table 36 under Section 4.16).				
	Quarterly air quality monitoring shall be carried out at the Sensitive Receptor locations.			M & E Agency	Quarterly
		Tarpaulin lining during transportation;	Grievances, if any; Community consultation	DPIU/ DPMU	Weekly

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
Littering during transportation of excavated material	All transportation vehicle shall be provided lining arrangement while transporting muck to restrict littering on road.	Air quality near to the site and at habitation areas;	Air quality report		Quarterly
Disturbance in fishing by local fisher community	Local fishers will face disturbance in catch at active zone of canal resectioning work due to construction of bund. However, fisher community may perform fishing on other part of canal, where bund is not constructed.	Submission & approval of canal closure plan; Dissemination of canal closure plan; Grievance on fishing;	Review of canal closure plan	DPMU	Before construction of bund
	Contractor shall submit work plan with canal closure timeline for each restoration site to DPMU at least before 45 days of construction of bund for dewatering purpose;		Site visit and consultation with local fisher community		Monthly
	Restoration plan shall not be approved by DPMU, if not submitted at least 45 days prior to initiation of work at each site;				
	Subsequent to receive and approve of work plan, local fisher community should be informed about canal closure plan at-least before 30 days from bund construction. Canal closure notice board shall be displayed at local panchayat/ irrigation/ fishery and BDO office.				
II. Slope Stabilization of Critically Affected Reaches of Main, Branch and Distributaries canals by PCC Block Lining (B.1) **II. Slope stabilization of critically affected reaches of Minor / Sub-minor (LVL 4) by PCC Block lining (B.2)**					
Impact due to construction activity	ESMP for construction activity shall be applied				
Top soil exposure due to denudation leading to soil erosion	The clearing of vegetation in sections will ensure only areas of the land to be developed at a particular time are exposed to agents of erosion. This will also ensure the cleared areas of the land are not left bare over long periods as development at the cleared areas will be carried out immediately. This will minimize erosion at the project site.	No. of tree species cleared in different phases and area restored; Quantum of earth (Cum) generated, percentage utilised and disposed-off. Denuded area covered under plantation after construction (% of area) Water quality in the working zone and deviations from the standards / baseline in different periods; Lining work initiated on cleared portion	Physical Verification of Site; Report of the Contractor; Water Quality Report	DPIU	Weekly
Impact on flora/ fauna during weed cleaning operation	Contractor shall take reasonable precaution to prevent his workers from damaging any flora or fauna of the area specially during vegetation clearance.	Quantum of weeds generated, its use and disposal	Physical verification of site; Review of quarterly report by contractor;	DPIU	Weekly

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	Vegetation clearance shall be limited to portions of the canal slope to be lined at a particular time. The entire land shall not be cleared at a time and this will allow any fauna to migrate to adjoining areas.		Consultation with locals		
Organic pollution due to improper dumping of removed weeds, shrub stems, stumps, roots, twinges and leave on canal side embankment leading to inconvenience to local commuters; odour pollution.	Possibility shall be explored to engage Food Processing Industries and Horticulture Department for using removed weed in vermi composting promoted under this project. The management and disposal of this waste will be as follows (details are provided in the ESMP for waste management): Local community will be allowed to collect the shrub stems, stumps, roots for use as fuelwood and fencing material and weeds for domestic use such as using it as fuel, animal fodder or for composting.	Quantum of weeds generated, its use and disposal;	Physical verification of site; Consultation with local community; Review of quarterly report by contractor;	DPIU	Weekly
	Identification of temporary storage locations for drying and temporary storage of the weed waste in consultation with the IWD site engineers and the local government authority. The locations will not be within 100 m of the identified Sensitive Receptors (listed in Table 36 under Section 4.16).				
	The Contract Package ESMP and Contractor's ESMP will list and provide map of the identified locations.				
	Temporary storage of the weed waste at identified locations for a period not exceeding 10 days.				
	Sale or free lifting of dry/semi-dry weed waste for onward processing into compost, ropes (for handicrafts and furniture making), fodder, etc. The Contract Package ESMP and Contractor's ESMP will provide details of quantity to be disposed in this way along with details of interested parties.				
	The following Dos and Don'ts are to be followed for management of weed waste:				
	• Weed waste will not be stored at unauthorized locations. • Contractor shall not burn weed waste. • Dumping of weed waste at unauthorized locations is not to be undertaken. • In case on onward sale of the weed waste, the sale agreement will include prohibition of				

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	environmentally harmful practices (open burning of semi-wet waste, dumping of waste residues in unauthorized locations including water bodies, etc.).				
Air Pollution due to Burning of weeds, shrub stems, stumps, roots, twinges and leave	Contractor shall not adopt practice of burning weeds, shrub stems, stumps, roots, twinges and leave;	Air quality in the work site and aberration from standards.	Air quality test report;	DPIU	
	Discouraging local community in burning of weeds, shrub stems, stumps, roots, twinges and leave;		Consultation with local people / workers	DPIU	Weekly
Tree felling due to PCC lining activity	Avoidance of tree cutting to the possible extent with locational and design alternatives;	No. of trees uprooted by at project site;	Physical verification by site inspection	SPMU	Quarterly
	Chainage wise requirement of tree felling shall be counted with their species;	No. of trees not falling in the working zone but uprooted;	Review of records / repots	DPMU	Monthly
	Consult with local community as well as DPIU in identifying suitable local indigenous tree species; available community land or Govt. vacant land for compensatory plantation.	No. of trees planted (compensatory afforestation) and zone of plantation;	Consultation with local community	DPMU	
	Tree felling shall be commenced only after obtaining permission from Dept. of forest.	Type of tree species planted and bio-diversity maintenance		DPMU	
	Shrub stems, stumps, roots shall be uprooted properly to eliminate any chance of void under PCC lining.	Plant survival rate (newly planted saplings)		DPIU	
	Before taking civil measures, the surface area of the ground to be occupied shall be cleared of all roots and vegetable matter and stripped to a suitable depth as per IS: 4701 – 1982.				
	To compensate loss of tree and to improve the local aesthetic value, Compensatory tree plantation at 1:5 ratio will be carried out.			DPMU	
Loss of top soil	Generated small quantity of top soil shall be preserved and suitably reused for levelling, back filling purpose.	Quantum of top soil generated, percentage utilized and disposed-off;	Physical Verification of Site;	DPMU	Weekly
	Top soil may be temporarily staked in either side of embankment for field reuse;	Denuded area covered under plantation after construction (% of area).	Review of quarterly report by contractor;		
Dust pollution due to stocking of top soil on embankment site	Regular water sprinkling shall be provided to maintain moisture content- which in turn will reduce dust pollution;	Record on water sprinkling	Report of the Contractor;	DPIU	Weekly
	In case of transportation of top soil, tarpaulin cover shall be provided to restrict dust pollution during transportation.	Tarpaulin cover during transportation	Record on days of water sprinkling done in non-monsoon seasons	DPIU	Weekly

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	At canal stretches in proximity of sensitive receptors, the following additional mitigation measures will be implemented:				
	The Contract Package ESMPs and Contractors ESMPs will specify the list of sensitive receptors. (the list of sensitive receptors – educational institutions, healthcare institutions and etc. are provided in Table 36 under Section 4.16).				
	Quarterly air quality monitoring shall be carried out at the Sensitive Receptor locations.				
Sediment transport in streams, canal, water bodies leading to increased TDS and turbidity	Immediate collection and clearance of excess muck/soil from canal slope/bed to minimize the erosion potential and sediment transportation into canal water which may cause increased water turbidity or TDS.	Quantum of earth (Cum) generated, percentage utilized and disposed-off; Mechanism adopted for safe storage of generated top soil for reuse / clearing; Denuded area covered under plantation after construction (% of area) Slope maintained as per design Downstream and upstream water quality;	Site inspection / visit; Review of quarterly report by contractor; Analysis of water quality report	DPMU	Monthly
	Slopes of embankments to be constructed and maintained at a stable gradient according to design specifications to minimize gully erosion;				
	Embankments shall not be left un-compacted during construction works to minimize wind and water erosion.				
Littering on road due to transportation of earth from borrow areas	All transportation vehicle shall be provided with tarpaulin lining.	Lining in transportation vehicle; Borrow area and earth quantity	Site inspection / visit; Review of quarterly report by contractor;	DPIU	Weekly
III. Rehabilitation and upgradation of canal regulating structures of Main, Branch and Distributaries canals (sub-component under B-1) **III. Rehabilitation and upgradation of canal regulating structures of Minor / Sub-minors (sub-component under B.2)** **IV. Providing controlled structures (Duckbill weir) at tail end of canals and other locations of Level 4 canals (sub-component under B-1)** **IV. Construction of gates/shutters at uncontrolled outlets (sub-component under B.2)**					
Impact due to construction activity	ESMP for construction activity shall be applied				
Air and dust pollution due to demolition work; health impact on workers	All structure and demolition sites shall be wetted regularly before and after demolition work, to minimize air and fugitive dust pollution.	Air quality in the site; Workers using PPEs	Site inspection and physical verification; Air quality report	DPMU	Weekly
	Demolition site shall be covered from all site to arrest fine particle as well as to reduce air pollution.				
	Demolition workers shall be provided with PPEs to minimize health impact due to dust and air pollution				

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
Noise pollution & vibration and its impact on workers and community health	Demolition site shall be covered from all site to arrest / restrict spreading of noise due to demolition work.	Machinery / equipment / vehicles having latest certificate of maintenance;	Site inspection and physical verification;	DPMU	Weekly
	All demolition work shall be restricted between day time (7.0 AM to 8.0 PM).	No. of workers using ear-plugs / ear-muffs to reduce occupation exposure;	Noise quality report;		Quarterly (During demolition)-13 location
	Local people shall be made aware of specific time duration of demolition work, in advance.	Noise emitting machineries with protecting damping;			
	Sign board showing site of demolition work and time shall be provided at demolition site;	Use of explosive; blasting operation	Verification of used instrument / machineries;		
	Demolition work will not be permitted at any silence area or zone (100 meters from hospital, school) during active working hours (10 AM to 5 PM); demolition work in silence zone shall preferably be carried out on weekend and holiday or between 6 A.M to 10 A.M and 5 PM to 8 PM of other weekdays.		Consultation with local habitants;		
	Heavy noise emitting equipment shall be fitted with silencer. Noise barrier shall be provided to generator set.				
	Reducing the noise produced from a vibrating machine by vibration damping i.e. making a layer of damping material (rubber, neoprene, cork or plastic) beneath the machine.		Site inspection and physical verification	DPMU	Weekly
	Explosion or blasting operation shall not be performed within 500 meters periphery of nearby local habitat or structure.	Blasting sites and measure adopted to reduce effect of vibration	Consultation with local habitants		
	Contractor shall conduct vibration testing during blasting operation (if any) by engaging any third party at least at ten (10 – for whole project) location. Testing location shall be identified in consultation with DPMU and submit vibration report to DPMU.	Damage due to blasting/ vibration	Vibration testing;	Contractor	Each Blasting Site
	Demolition workers shall be provided with PPEs (earmuff) to minimize health impact due to noise pollution				
Vertical water fall with high velocity on the downstream side of crest may cause erosion	Apron/ wave breaker where ever required shall be provided for decapitation of excess energy	Apron/ wave breaker provided;	Site inspection and physical verification	DPIU/ DPMU	

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
Water and land pollution due to debris from dismantling structures and spoil	Reuse of dismantled materials to the possible extent; Unused / unusable materials shall be auctioned as per the procedures of Govt. / IWD or leftover C&D waste shall be disposed-off in the nearby sanitary landfill site.	Reuse and disposal of C&D items; Water Pollution management plan; Water quality in nearby river/ stream;	Water quality report; Site inspection; Review of records / reports	DPMU	Weekly
B.2- Minor Canal (L4) and Chak Infrastructure Modernization					
V. Irrigation through installation of pressured supply					
Impact due to construction of water storage sump	ESMP for construction activity shall be applied				
Consumption of conventional energy for pumping and water distribution which will increase economic cost of production	Along with electrification, use of solar panels for energizing the water extracting pumps and channelizing water to the fields	Percentage increase in area irrigated; Percentage reduction in gap ayacut in the command; Consumption of renewable and non-renewable energy;	Consultation with farmers in the command area; Reports / records; Site Inspection	IWD	Quarterly
VI. Construction of water retaining structure over minor channels to create storage for use in rabi crops					
Impact due to construction activity	ESMP for construction activity shall be applied				
Flooding of nearby agricultural field during dewatering before construction	Construction work shall be carried out when the river/ canal bed is dry.	No. of sites where dewatering is done	Site inspection / visit;	DPMU	Weekly
	Else, earthen bund shall be constructed for dewatering of active work zone;	Adopted dewatering mechanism;	Consultation with farmer having land adjoining to work site		
	River/ canal water shall not be pumped out for dewatering purpose to nearby agricultural field to avoid any kind of crop damage as well as agricultural land pollution (although probability of land/ soil pollution is very low; as this water is being used for irrigation purpose).	Crop area and type affected due to dewatering;	Review of quarterly report by contractor;		
	Crop compensation shall be paid to affected farmers on occurrence of crop damage due to dewatering.	Crop compensation paid to affected farmers.			
Crop damage due to interrupted irrigation supply	Contractor shall submit work plan with canal/ river closure timeline for each restoration site to DPMU at least before 45 days of any crop season;	Submission & approval of canal/river closure plan	Review of closure plan	DPMU	Before each crop season
	River/ canal closure plan shall not be approved by DPMU, if not submitted at least 45 days prior to any crop season;	Dissemination of canal/ river closure plan	Consultation with farmer having land adjoining to work site		

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	Subsequent to receive and approve of work plan, farmers should be informed about canal closure plan at-least before 30 days of any crop season. Canal closure notice board shall be displayed at local panchayat/ irrigation/ fishery and BDO office.		Review of quarterly report by contractor;		
Sediment transport in streams, canal leading to increased TDS and turbidity	All earther bund constructed for dewatering purpose shall be removed and entire work zone shall be levelled properly before monsoon period to maintain natural canal flow, minimize soil and sediment transportation to downstream and water pollution. Muck/ soil may be stored at canal/ river set back zone or either side of embankment for temporary period. Immediate collection and clearance of excess muck/soil from canal bed to minimize the erosion potential and sediment transportation into canal water which may cause increased water turbidity or TDS;	Removal of earthen bund; Clearing and levelling of work zone; Reuse and disposal of muck; Downstream and upstream water quality;	Site inspection / visit; Review of quarterly report by contractor; Analysis of water quality report	DPMU	Quarterly; before monsoon
VII. Demonstration for diversification and support in Horticulture, providing infrastructure of cultivation and construction of low cost storage structure – Department of Food Processing Industries and Horticulture					
1) Providing subsidy for area expansion and planting material to promote less water consuming fruits and vegetables					
Agriculture run off may be containing excess fertilizer promotes the excessive growth of aquatic plants (such as algae, weed and water hyacinth)	Optimum use of fertilizer, promotion of the use of organic manure and bio-fertilizer. Prevention of agricultural runoff to flow in to the canal / river / water bodies by adoption of efficient irrigation methods; Promotion of IPNM strategies among the farmers in the command area by training, demonstrations and hand holding support. Supply of IEC materials on specific doses of application of fertilizer for different crops during different seasons, in accordance with the earlier researches.	Farm level water quality; Farm level soil test; No. of farmers adopted INM / IPM / IPNM by holding category and crop type during different agricultural seasons;	Soil test report; Soil health card; Farm level water quality report; Field assessment; Consultation with farmers Consultation with extension service provides	Dept. of FPI&H	Monthly
Deterioration of groundwater quality	Promotion of organic farming that encourages use of organic fertilizers and pesticides Optimum use of chemical fertilizer and pesticides. Discouraging ground water extraction for agricultural and meeting high water consumption requirements in critical / semi-critical / unsafe zones. Sensitization / awareness of farmers on ground water extraction potential and ground water conservation.	No. of farmers adopted INM / IPM / IPNM by holding category and crop type during different agricultural seasons; Increase in surface water utilization and decrease in ground water withdrawal for irrigation purpose;	Ground water quality testing; Review of report on fertilizer and pesticide use; Field assessment on use of fertilizer and pesticide .	Dept. of Agriculture	Monthly

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	Participatory Ground Water Management through ground water user groups may be promoted, more specifically in semi-critical groundwater zones.	Use of chemical fertilizer and pesticides			
Soil quality degradation due to excess use of Fertilizer and pesticide	Training farmers for promoting adoption of integrated weed and pest management practices such as use of certified and disease tolerant seed varieties, use of early maturing seed varieties, proper land preparation, early planting, following recommended planting space between rows and plants, timely/early weeding, suitable water management practices and the use of agrochemicals where necessary. This will minimize the rate of agrochemical use.	No. of farmers adopted INM / IPM / IPNM by holding category and crop type during different agricultural seasons; No. of training organized on integrated weed and pest management.	Record on training provided; Review of record on use of different type of fertilizer and pesticide; Field assessment on use of fertilizer and pesticide	Dept. of FPI&H	Quarterly
	Dept. of Horticulture and Agriculture will ensure successful implementation of IPNM (given in ESMF of WBMIFMP).				
	Dept. of Horticulture and Agriculture will sensitize farmers to, preferentially, use selective pesticides with low environmental impact quotient (EIQ) where appropriate, rather than broad-spectrum products, to minimize impacts on non-target species.				
	Under minimum/reduced tillage, the stocks and leaves of harvested crops will be left on the field as much as possible to serve as mulch to conserve soil moisture and also improve soil biological condition on decomposition.				
	The farmers will be encouraged to use organic manure to minimize the use of inorganic manure and improve soil biological conditions.				
2) Providing subsidy for construction of Shade-net house 3) Providing subsidy for infrastructure development for promotion of vermi compost, protected cultivation and post-harvest infrastructure					
Construction activity	ESMP for construction activity camp site management plan shall be applied				
Use of agricultural land for construction	Use of irrigated agriculture land for PHI will be avoided,	Location of and type of land selected for PHI development; Number of PHI constructed;	Field observation; Consultation with farmer/ community	Dept. of FPI&H	Quarterly
	Exploring availability of Govt./ GP land for construction PHI,				

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
of Post-Harvest Infrastructure (PHI)	In PPP mode of infrastructure creation, the private body (FPC/ SHG), individual entrepreneur should arrange land in case of non-availability of Govt. land.	Use of Govt. land for construction of PHI			
Soil contamination due to storing of construction material on agriculture field	Construction work shall not be carried out during monsoon season; to minimize impact on cultivated crop, construction work shall be carried out only when firm land is devoid of any crop; any left-out waste or construction material shall be stored and collected and disposed properly; metal waste shall be sold to authorized recycler.	Period of construction work; list of construction material with quantity; Waste utilization plan adopted during implementation;	Community consultation; Consultation with implementing contractor on waste utilization; review of record on waste utilization	Dept. of FPI&H	Monthly
VIII. Agriculture Marketing – Agriculture Marketing Dept.					
1) Construction of aggregation centre/ pack house for temporary/ intermediate storage of farm produces (1/ FPC)					
Impact due to construction activity	ESMP for construction activity shall be applied				
Use of agricultural land for construction of aggregation centre / pack house	Use of irrigated agricultural land for aggregation centre / pack house will be avoided; Exploring availability of Govt. land / GP land for PHI; In PPP mode of infrastructure creation; private body should arrange land in case of non-availability of govt. land.	Change in land use pattern, if any; Construction activities as per the design;	Physical verification and production assessment; Consultation with farmers; Review of reports	Dept. of Agriculture Marketing	Fortnightly
Soil contamination due to generation of solid waste	Solid waste shall be collected regularly to maintain aesthetic value of nearby area and maintain hygiene condition.	Construction related practices followed / adopted;	Detail project Report (DPR); Consultation with FPC members; Site visit and physical verification	Dept. of Agriculture Marketing	Fortnightly
Procurement and use of machineries that does not comply to standards resulting with poor energy efficiency.	The machineries / instruments to be procured / installed should have ISI mark and energy efficiency certification.	Machineries / equipment procured / installed; Vendor details (registered / unregistered)	Review of documents; Consultation with FPC members; Site visit and physical verification	Dept. of Agriculture Marketing	Before Purchase
2) Transport subsidy to each FPC for procurement of motorized van (4.5 lakh/ FPC)					
Procurement and use of vans that are not as per the standard for agricultural	The van to be procured should comply to prescribed standards for transportation of agricultural commodities;	Vehicle procured and its standards; Vendor details (registered / unregistered)	Review of documents; Consultation with FPC members; Site visit and physical verification	Dept. of Agriculture Marketing	Before sanctioning subsidy

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
commodity transportation					
IX. Promotion of cage based pisciculture in the main and branches of irrigation canals					
1) Providing 8 no. cages with appurtenant to each SHG/ FPGs 2) Providing fish seed, fish feed etc. to SHG/ FPGs as one-time sustenance support					
Pollution from overstocking and overfeeding	Avoiding overfeeding; Avoiding or minimize or control use of medication	Use of feeding system and application of medicines	Consultation with fishers / SHGs / FPG members; Site inspection and physical verification	Dept. of Fishery	Monthly
Risk of cultivation of exotic species that may impact native populations	Maintaining proper stocking density; Avoiding stocking exotic and invasive species;	Stocking density and species assessment in cases	Consultation with fishers / SHGs / FPG members; Site inspection and physical verification	Dept. of Fishery	Monthly

Annexure- 28(b) ESMP Implementation Monitoring Plan for Flood Management

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
I. Desiltation of Mundeswari river for a length of 19.67 km from Beguahana to further downstream (including 430 metre u/s of undivided Damodar) **II. Desiltation of 41 nos. other drainage channels**					
Top soil/ sand exposure due to denudation leading to soil erosion	The clearing of vegetation in sections will ensure only areas of the land to be developed at a particular time are exposed to agents of erosion. This will also ensure the cleared areas of the land are not left bare over long periods as development at the cleared areas will be carried out immediately. This will minimize erosion at the project site.	Portion cleared at a particular time; Desilting work initiated on cleared portion; Water and air quality in the working zone and deviations from the standards / baseline in different periods.	Physical verification of site; Report of the Contractor; Water & Air Quality Report	DPIU	Weekly
Impact on flora/ fauna during weed cleaning operation	Contractor shall take reasonable precaution to prevent his workers from damaging any flora or fauna of the area specially during vegetation clearance. Vegetation clearance shall be limited to portions of the river/ drainage channels to be desilted at a particular time. The entire land will not be cleared at a time and this will allow any fauna to migrate to adjoining areas.	Quantum of weeds generated, its use and disposal	Physical verification of site; Consultation with workers/ local people; Review of quarterly report by contractor;	DPIU	Weekly
Organic pollution due to improper dumping of removed weed on river/ drainage channels side embankment leading to inconvenience to local commuters; odour pollution	Possibility shall be explored to engage Food Processing Industries and Horticulture Department for using removed weed/ hyacinth in vermi composting promoted under this project. The management and disposal of this waste will be as follows (details are provided in the ESMP for waste management): Local community will be allowed to use the weeds for domestic use such as using it as fuel (shrub stem, root), animal fodder or for composting.	Quantum of weeds generated, its use and disposal;	Physical verification of site; Consultation with local community; Review of quarterly report by contractor;	DPIU	Weekly
	Identification of temporary storage locations for drying and temporary storage of the aquatic weed waste in consultation with the IWD site engineers and the local government authority. The locations will not be within 100 m of the identified Sensitive Receptors (listed in Table 36 under Section 4.16).				
	The Contract Package ESMP and Contractor's ESMP will list and provide map of the identified locations.				

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	Temporary storage of the aquatic weed waste at identified locations for a period not exceeding 10 days.				
	Sale or free lifting of dry/semi-dry aquatic weed waste for onward processing into compost, ropes (for handicrafts and furniture making), fodder, etc. The Contract Package ESMP and Contractor's ESMP will provide details of quantity to be disposed in this way along with details of interested parties.				
	The following Dos and Don'ts are to be followed for management of aquatic weed waste:				
	• The aquatic weed waste will not be stored at unauthorized locations. • Burning of aquatic weed waste is not to be undertaken. • Dumping of aquatic weed waste at unauthorized locations is not to be undertaken. In case on onward sale of the aquatic weed waste, the sale agreement will include prohibition of environmentally harmful practices (open burning of semi-wet waste, dumping of waste residues in unauthorized locations including water bodies, etc.).				
Air Pollution due to Burning of weeds	Contractor shall not adopt practice of burning weeds; Discouraging local community in burning of weeds;	Air quality in the work site and aberration from standards.	Air quality test report; Consultation with local people / workers	DPIU	Weekly
Flooding of nearby agricultural field during dewatering before desiltation		No. of sites where dewatering is done; Crop area and type affected due to dewatering; Crop compensation paid to affected farmers.	Site inspection / visit; Consultation with farmer having land adjoining to work site Review of quarterly report by contractor;	DPMU	Weekly
	Most of the desiltation work will be carried out when the river/ drainage channels bed is dry.				
	Else, bund shall be constructed for dewatering of active work zone;				
	River/ drainage channels water shall not be pumped out for dewatering purpose to nearby agricultural field to avoid any kind of crop damage as well as agricultural land pollution (although probability of land/ soil pollution is very low; as this water is being used for irrigation purpose).				
	Crop compensation shall be paid to affected farmers on occurrence of crop damaged due to dewatering.				

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	In case channel/ river (undivided Damodar) water is pumped out for dewatering the following do and don'ts will be followed: Ensure that the pumped-out water will not deteriorate the water quality of the receptor water bodies. Undertake prior consultation, secure agreement and give adequate notice to other users of receptor water bodies. Don't let the water out onto roads, areas close to habitations that are prone to water logging, etc.				
Crop damage due to interrupted irrigation supply	Contractor shall submit work plan with river/ drainage channel closure timeline for each desiltation site to DPMU at least before 45 days of any crop season; Desiltation plan shall not be approved by DPMU, if not submitted at least 45 days prior to any crop season; Subsequent to receive and approve of work plan, farmers should be informed about river/ drainage channel closure plan at-least before 30 days of any crop season. River/ drainage channel closure notice board shall be displayed at local panchayat/ irrigation/ fishery and BDO office.	Availability of approved of river/ canal closure plan; Dissemination of river/ canal closure plan	Review of river/ canal closure plan; Consultation with farmer having land adjoining to work site; Review of quarterly report by contractor;	DPMU	Before each crop season
Sediment transport in river/ drainage channel leading to increased TDS and turbidity	All bund constructed for dewatering purpose shall be removed and entire work zone shall be levelled properly before monsoon period to maintain natural river/ drainage channel flow, minimise soil and sediment transportation to downstream and water pollution. Immediate collection and clearance of excess sand/ muck/soil from river/ drainage channel bed to minimize the erosion potential and sediment transportation into river/ drainage channel water which may cause increased water turbidity or TDS;	Removal of bund; clearing and levelling of work zone; Amount of sand/ muck / silt generated, reused and disposed-off; Water Quality of upstream and downstream	Site inspection / visit; Review of quarterly report by contractor;	DPMU	Weekly (specially before monsoon)
Over desiltation and/or desiltation in unplanned area / manner may aggravate environmental impact	Contractors having prior experience of river/ drainage channel desiltation and well-trained staff should only be selected for desiltation of Mundeswari river & other 41 drainage channel. Contractor shall conduct site specific testing of desilted materials to assess the appropriateness for different users. Preparation of Safety and Security plan by the Contractor before initiation of desiltation work. Prepared and submit desiltation plan including disposal plan with action time chart and risk management plan to	Experience of contractor in river and canal desiltation; Availability of desiltation plan, safety plan and desiltation scheduling; Volume of desilted material generated in each quarter and reused for beneficial purpose	Work order, work agreement and completion certificate; Physical verification of site and tallying with the plan; Consultation with contractor; Communication letter	SPMU	During selection of contractor Before desiltation

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	DPMU and SPMU for approval prior to carrying out desiltation operations. Desiltation plan should be prepared considering its location w.r.t environmental sensitive locations/ archaeological locations/ cultural festival/ pollution influx in the area/ quality & texture of desilted material/ available depth etc. through local sources and past experience.				
Health impact on workers and local community due to desiltation operation	Desilting contractor should follow the defined safety procedures to avoid accidents and spills.	Application of safety norms	Site visit; consultation with workers and contractor	DPMU/ SPMU	DPMU- Weekly, SPMU- Monthly
	Inform local community prior to desiltation operation to avoid any conflict arising from desiltation operation.	Prior information to local community	Consultation with local community	DPMU/ SPMU	
Dewatering of desilted material and associated water and soil contamination and sediment transportation	Desilted material should be temporarily stored on setback zone to drain out water; tail water shall properly be channelized in a sump to settle down sediment; sediment free filtrate water will be discharged into downstream river water.	No. of sediment trap provided; cleaning of sump;	Site Inspection; Discussion with contractor / workers; Physical verification	DPMU/ SPMU	DPMU- Weekly, SPMU- Monthly
	Sediment settling sump shall be cleaned regularly to avoid over-flow.				
	Tail water shall not be discharged directly to downstream river water without sediment trapping;				
	Regular monitoring of the excess water at sediment trapping system shall be done. This will help in assessing the efficiency of sediment trap system provided at site.				
Sediment release, transportation and mixing with water during desiltation	No stacking of desilted material on river bed or agricultural field during monsoon period;	Stacking and reused quantum of desilted materials; Removal of ramps	Site inspection and observation; Discussion with contractor; Site inspection, specifically before the on-set of monsoons; Review of transportation log book;	DPMU/ SPMU	DPMU- Weekly, SPMU- Monthly
	Immediate shifting of desilted materials from stream to temporary stacking point;				
	Early evacuation of desilted material/ dewatered sand material from set-back zone to next point to minimize the potential for erosion into river water which may cause soil and sediment transportation in downstream.			DPMU	
	Proper levelling of work zone before monsoon.				
Soil pollution due to temporary stacking of desilted materials; stocking on agricultural field	Desilted waste management plan given in Section 7.3.3 shall be applied	Soil and water quality;	Physical verification through site;	DPMU/ SPMU	DPMU- Weekly, SPMU- Monthly
	Desiltation material will temporarily be stored on river set back zone located on both side of river and bank of drainage channel.	Stacking and disposal management practices adopted;	Review of data on desilted quantum, used and disposed quantum;		
	Storing of excavated material on nearby agricultural field shall be avoided to the extent possible;	Soil and water quality;			

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	In case of unavoidable circumstances, agreement of farmer is mandatory for use of land for temporary stocking;	Quantum of stocking and area used (in Ha.); No. of farmers land temporarily used for stacking;	Soil and water quality and comparing with baseline; Review of agreement with farmers; Consultation with farmers		
	Compensation to farmers for temporary stacking;				
	Earmarked land shall be developed by removing top soil for temporary stacking.				
	Bed lining using brick paving and thick tarpaulin in the area of stocking to restrict it's mixing with top soil;				
	Bund around temporary storing area of desilted material;				
	Top soil shall be preserved and levelled properly after removal of entire desilted material;				
	Restoration of land to its previous position or its improvement				
	Desilted material shall be reused before monsoon season;				
Disposal of excess desilted material- Impact on Soil quality.	Desilted material should not be disposed-off in river banks or agricultural field;	Disposal percentage to total desilted quantum; Reused area and quantum reused (percent to total desilted material); Disposal site status and disposal methods; Soil quality in disposal site	Site inspection; Consultation with locals / inhabitants; Review of documents; Soil quality report	DPMU/ SPMU	DPMU- Weekly, SPMU- Monthly
	Reuse of desilted material to the possible extent and disposal of remains;				
	Filling up of vacant low-lying Government land identified and approved both by the IWD and by the local government authority				
	In case, if the desilted materials found unsuitable for field or other application, it would be disposed-off as per the sediment disposal plan given in Section- 7.3.3.				
	If desilted material is found contaminated with heavy metal at any particular location, material should be disposed at nearby approved TSDF site.				
Dust and air pollution from flying of dried up desilted material; littering during transportation	Regular water sprinkling arrangement on desilted material specially during hot-summer season to maintain soil moisture and minimise dust pollution;	Air pollution in the work and habitation site; Covering of transportation means	Air quality report review; Site inspection; Discussion with local habitants.	DPMU	Regular
	All truck shall be tarpaulin covered while transporting desilted material;				
	Transportation vehicle with bed lining arrangement while transporting desilted material to restrict littering on road.				
	At canal stretches in proximity of sensitive receptors, the following additional mitigation measures will be implemented:				
	The Contract Package ESMPs and Contractors ESMPs will specify the list of sensitive receptors. (the list of				

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	sensitive receptors – educational institutions, healthcare institutions and etc. are provided in Section 4.16).				
	Quarterly air quality monitoring shall be carried out at the Sensitive Receptor locations.				Quarterly
Impact on fauna including Vulnerable mammal (Fishing Cat, Asian Small-clawed Otter) and Snake (King Cobra)	Desiltation operation shall be carried out only during non-monsoon period when major portion of river/ drainage channel bed remains dry;	Reported cases of impact on aquatic fauna	Site inspection and observation; Review of reports / data; Discussion with local community	DPIU/ DPMU	DPIU- Regular, DPMU- Weekly
	The contractor and its workers will be educated / sensitized on endangered/ vulnerable species and its protection measures;				
	Hunting or poaching of Vulnerable mammal (Fishing Cat, Asian Small-clawed Otter) and Snake (King Cobra) shall be strictly restricted. On observation, any such species shall be allowed to migrate in nearby area.				
	Not using any threatened/ near threatened species for commercial purpose;				
	Desiltation work at Mundeswari river shall be restricted between 6 AM to 6 PM; any kind of work on river bed shall NOT be performed during night time (7 PM to 6 AM)				
	All sources of light on Mundeswari river bed shall be switched off during night time (6PM to 7AM)				
	Vibration measures shall be performed before initiation of desiltation work at Mundeswari River to allow species to come out from their cave and migrate to surrounding places;				
	Weed clearing on Mundeswari river shall be restricted to active work zone, this will allow fauna species to migrate in nearby bushes;				
	Fishing cat which is State animal of West Bengal shall be protected from any kind of damage; occurrence of damage to any vulnerable, threatened species shall be reported to Dept. of Biodiversity on regular basis;				
	Silencer shall be provided with all noise generating machineries operating during desiltation operation; Reducing the noise produced from a vibrating machine by vibration damping i.e. making a layer of damping material (rubber, neoprene, cork or plastic) beneath the machine;				

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
Impact on aquatic fish and benthic communities	Desiltation operation shall be carried out only during non-monsoon period when major portion of river/ drainage channel bed remains dry;	Reported cases of impact on aquatic fish	Site inspection and observation; Review of reports / data; Discussion with local community	DPIU/ DPMU	DPIU-Regular, DPMU-Weekly
	The contractor and its workers will be educated / sensitized on vulnerable (3), endangered (1), near threatened (3) and near extinction fish species and its protection measures;				
	Not performing fishing activity during desiltation work in river/ drainage channel or near-around area water-bodies,				
	Not using any threatened/ near threatened species for commercial purpose;				
	Any vulnerable (3), endangered (1), near threatened (3) and near extinction fish species found during dewatering of active desiltation zone shall be preserved and immediately release to downstream river/ drainage channel water.				
Impact on socioeconomic environment	Limiting desiltation operations to day time only, i.e. 7:00 Am-8:00 PM;	Seasonality and timing of desilting operation; Use of technically specified earthmoving machineries with operational clearance;	Site inspection; Log book and document verification; Consultation with local inhabitants;	DPIU/ DPMU	DPIU-Regular, DPMU-Weekly
	Use of machineries equipped with noise reduction / masking equipment;				
	Log book should be maintained for recording the accidents at site.				
	Analysis shall be carried out to assess the reason for the accident / mortality and measures should be taken to prevent repetition of the event.				
Disruption of livelihoods due to temporary stocking of desilted material in agricultural land located at set back zone	To the extent possible areas with habitation / business establishments / cultivable areas will be avoided;	Total cultivated and uncultivated land (in Ha.) used for temporary stocking; Temporary acquisition of land for stocking (in Ha.); Willingness of the land owner / cultivator to use land for stacking No. of persons affected and no. of persons paid compensation	Site inspection; Consultation with farmers / contractor / local community; Review of reports / documents	DPMU/ SPMU	DPMU-Weekly, SPMU-Monthly
	In case of any loss of livelihood, PAP will be compensated under the project.				
Impact on livelihood of local fisher community	Allowing fishing in other locations, excluding the working zone on temporary basis;	No. of fisher's dependent on specific location for fishing;	Discussion with fishers;	DPIU	Weekly

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
		Average percentage increase or reduction in seasonal catch; Shift in catching locations	Discussion with fishery Dept.		
III. Armouring of Damodar Right Dwarf embankment to act as Broad Crested Weir to allow controlled spilling of flood water **IV. Improving Damodar Protected Left Embankment by providing adequate free board to withstand flood through construction of flood walls at identified locations** **V. Improving Upper Rampur & Hurhura Channels by providing adequate freeboard through provision of flood wall on Left Embankments** **VI. Raising & Strengthening of countryside existing earthen embankments to its design section of Damodar Left, Hurhura Left & Lower Rampur left embankments** **VII. Protection / River training works on river Damodar / Mundeswari, Hurhura Khal, Upper Rampur and Lower Rampur Khal**					
Impact due to construction activity	ESMP for construction activity shall be applied				
Top soil exposure due to denudation leading to soil erosion	The clearing of vegetation in sections will ensure only areas of the land to be developed at a particular time are exposed to agents of erosion. This will also ensure the cleared areas of the land are not left bare over long periods as development at the cleared areas will be carried out immediately. This will minimize erosion at the project site.	No. of tree species cleared in different phases and area restored; Quantum of earth (Cum) generated, percentage utilized and disposed-off. Denuded area covered under plantation after construction (% of area) Water quality in the working zone and deviations from the standards / baseline in different periods; Work initiated on cleared portion	Physical Verification of Site; Report of the Contractor; Water Quality Report	DPIU	Weekly
Impact on flora/ fauna during weed cleaning operation	Contractor shall take reasonable precaution to prevent his workers from damaging any flora or fauna of the area specially during vegetation clearance. Vegetation clearance shall be limited to portions of the embankment at a particular time. The entire land will not be cleared at a time and this will allow any fauna to migrate to adjoining areas.	Quantum of weeds generated, its use and disposal	Physical verification of site; Consultation with workers/ local people; Review of quarterly report by contractor; Review of quarterly report by contractor;	DPIU	Weekly
Organic pollution due to improper dumping of removed weeds, shrub stems, stumps, roots, twinges and leave on canal side embankment leading to inconvenience to local commuters; odour pollution	Possibility shall be explored to engage Food and Horticulture Department for using removed weed in vermi composting promoted under this project. The management and disposal of this waste will be as follows (details are provided in the ESMP for waste management): Local community will be allowed to use the weeds for domestic use such as using it as fuel (shrub stem, root), animal fodder or for composting.	Quantum of weeds generated, its use and disposal;	Physical verification of site; Consultation with local community; Review of quarterly report by contractor;	DPIU	Weekly

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	Identification of temporary storage locations for drying and temporary storage of the aquatic weed waste in consultation with the IWD site engineers and the local government authority. The locations will not be within 100 m of the identified Sensitive Receptors (listed in Section 4.16).				
	The Contract Package ESMP and Contractor's ESMP will list and provide map of the identified locations.				
	Temporary storage of the aquatic weed waste at identified locations for a period not exceeding 10 days.				
	Sale or free lifting of dry/semi-dry aquatic weed waste for onward processing into compost, ropes (for handicrafts and furniture making), fodder, etc. The Contract Package ESMP and Contractor's ESMP will provide details of quantity to be disposed in this way along with details of interested parties.				
	The following Dos and Don'ts are to be followed for management of aquatic weed waste:				
	• The aquatic weed waste will not be stored at unauthorized locations. • Burning of aquatic weed waste is not to be undertaken. • Dumping of aquatic weed waste at unauthorized locations is not to be undertaken. • In case on onward sale of the aquatic weed waste, the sale agreement will include prohibition of environmentally harmful practices (open burning of semi-wet waste, dumping of waste residues in unauthorized locations including water bodies, etc.).				
Air Pollution due to Burning of weeds, shrub stems, stumps, roots, twinges and leave	Contractor shall not adopt practice of burning weeds, shrub stems, stumps, roots, twinges and leave; Discouraging local community in burning of weeds, shrub stems, stumps, roots, twinges and leave;	Air quality in the work site and aberration from standards.	Consultation with local people / workers; Review of quarterly report by contractor; Air quality test report;	DPIU	Weekly
Water and soil pollution due to coal tarring of bullah; health impact on workers	Coal tarring of bullah on agricultural land or river bed/ bank shall be avoided to the possible extent;	Quantity or coal tar purchased; Lining provided; use of PPF by workers	Site visit, Consultation with workers	DPIU	Weekly

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	Impervious lining arrangement shall be provided at coal tarring area;				
	Worker shall use full set of protective gear (hand gloves, shoes, mask, etc.) while handling coal tar; a first-aid kit will be available;				
Felling of trees (total 788, 526 with GBH= ≥ 50 ≤ 80 and 262 with GBH ≥ 80 nos.) due to flood wall construction and embankment strengthening works	Avoidance of tree cutting to the possible extent with locational and design alternatives;	No. of trees uprooted by at project site;	Physical verification by site inspection	SPMU	Quarterly
	Chainage wise requirement of tree felling shall be counted with their species;	No. of trees not falling in the working zone but uprooted;	Review of records / repots	DPMU	Monthly
	Consult with local community as well as DPIU in identifying suitable local indigenous tree species; available community land or Govt. vacant land for compensatory plantation.	No. of trees planted (compensatory afforestation);	Consultation with local community	DPMU	
	Tree felling shall be commenced only after obtaining permission from Dept. of forest.	Type of tree species planted and bio-diversity maintenance		DPMU	
	No tree felling will be allowed beyond the identified working zone; cutting of holy tree *Ficus religiosa* (*Peepal*) shall be avoided to the possible extent;	Plant survival rate (newly planted saplings)		DPIU	
	The construction and excavated materials will be staked at a safe distance from tree located in such areas to avoid any damage to the trees;			DPMU	
	Shrub stems, stumps, roots shall be uprooted properly to eliminate any chance of void.				
	To compensate loss of tree and to improve the local aesthetic value, compensatory tree plantation at 1:5 ratio will be carried out.				
	Maintaining bio-diversity in compensatory afforestation and avoid mono species plantation; Mixed plantation with locally grown species will be promoted in consultation with Forest Department and local community / Gram Panchayat;				
	Bamboo palisade will be provided around plantation area; after care measures for a period of thee year will be taken up				
Loss of top soil	Generated small quantity of top soil shall be preserved and suitably reused for levelling, back filling purpose.	Quantum of top soil generated, percentage utilized and disposed-off; Denuded area covered under plantation after construction (% of area).	Physical Verification of Site; Review of quarterly report by contractor;	DPMU	Weekly
	Top soil may be temporarily staked in either side of embankment for field reuse;				

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
Dust pollution due to stocking of top soil on embankment site	Regular water sprinkling shall be provided to maintain moisture content- which in turn will reduce dust pollution; In case of transportation of top soil, tarpaulin cover shall be provided to restrict dust pollution during transportation.	Arrangement of water sprinkling; Record on water sprinkling; Tarpaulin cover during transportation; Air quality near to the site and at habitation areas;	Site inspection; Report of the Contractor; Record on days of water sprinkling done in non-monsoon seasons	DPIU	Weekly
	At canal stretches in proximity of sensitive receptors, the following additional mitigation measures will be implemented:				
	The Contract Package ESMPs and Contractors ESMPs will specify the list of sensitive receptors. (the list of sensitive receptors – educational institutions, healthcare institutions and etc. are provided in Section 4.16).				
	Quarterly air quality monitoring shall be carried out at the Sensitive Receptor locations.		Air quality monitoring report	DPMU	Quarterly
Littering on road due to transportation of earth from borrow areas; dust pollution	All transportation vehicle shall be provided with tarpaulin lining.	Lining in transportation vehicle;	Site inspection / visit; Review of quarterly report by contractor;	DPIU	Weekly
Impact on public utilities and disruption of services	Consideration of design and locational alternative for minimum disruption of public utilities. Relocation of affected public utilities in consultation with concerned dept.; Reconstruction of demolished community facilities or provision of compensation in consultation with GP / local community; Necessary permission shall be obtained from respective Govt. agency;	No. of public utilities / community assets shifted / relocated / repaired or compensated;	Site inspection; Discussion with inhabitants on facilities and services; Review of records / reports	SPMU	Monthly
Impact on assets and livelihood; due to eviction from encroached land	To the extent possible, eviction will be avoided; In case of any eviction, the affected persons/families to be identified in advance and will be compensated at replacement value for the lost asset; (Refer RAP for detail) The affected person will be compensated / assisted before taking physical possession of the asset; Option for temporary relocation, till the end of construction, will be explored Loss of crop to be compensated financially in case of temporary use of land;	No. of persons affected and relocated (temporarily / permanently) No. of affected persons provided compensation awards for loss / acquisition of assets; No. of persons reengaged in different livelihood activities; Improvement / reduction in income of the affected families	List of affected families; List of PAFs / PAPs compensated for loss of assets; Consultation with PAFs / PAPs; Visit to project sites and physical observation of livelihood restoration.	DPMU/ SPMU	DPMU-Weekly SPMU-Monthly

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
Cultural properties such as Mandir- 31, burning ghat- 3 located on the both sides of the embankment	Re-examination of CPR before commencement of the work and list down CPR to be affected.	No. and type of cultural properties affected;	Site inspection;	DPMU	DPMU- Weekly SPMU- Monthly
	Design and location shall be modified to the possible extent to protect all cultural property and / or to minimize impact on it;	No. and type of CPR for which compensation paid or newly constructed;	Discussion with inhabitants on affected and restored CPR;	SPMU	DPMU- Weekly SPMU- Monthly
	If in case it is unavoidable, project shall construct or arrange similar establishment or compensate for the loss of asset in consultation with local people / GP.		Review of records / reports	SPMU	
VIII. Remodeling & Reconstruction of sluices at the outfalls of drainage channels					
Impact due to construction activity	ESMP for construction activity shall be applied				
Air and dust pollution due to demolition work; health impact on workers	All structure and demolition sites shall be wetted regularly before and after demolition work, to minimise air and fugitive dust pollution.	Air quality in the site; Workers using PPEs	Site inspection and physical verification; Air quality report	DPMU	Weekly
	Demolition site shall be covered from all site to arrest fine particle as well as to reduce air pollution.				
	Demolition workers shall be provided with PPEs to minimise health impact due to dust and air pollution				
	The Contract Package ESMPs and Contractors ESMPs will specify the list of sensitive receptors (given in Section 4.16).				
	Regular monitoring of air emissions at the Sensitive Receptor locations.				Quarterly
Noise pollution & vibration and its impact on workers and community health	Demolition site shall be covered from all site to arrest / restrict spreading of noise due to demolition work.	Machinery / equipment / vehicles having latest certificate of maintenance;	Site inspection and physical verification	DPMU	Weekly
	All demolition work shall be restricted between day time (7.0 AM to 8.0 PM).	No. of workers using ear-plugs / ear-muffs to reduce occupation exposure;	Noise quality report		Quarterly (During demolition)
	Local people shall be made aware in advance regarding specific time duration of demolition work.	Noise emitting machineries with protecting damping.			
	Sign board showing site of demolition work and time shall be provided at demolition site;	Use of explosive; blasting operation	Verification of used instrument / machineries;		
	Demolition work will not be permitted at any silence area or zone (100 metres from hospital, school) during active working hours (10 AM to 5 PM); demolition work in		Consultation with local habitants		

Expected Impact	Mitigation Measures	Monitoring Indicators	Means of Verification	Supervising and Monitoring Entity	Monitoring Frequency
	silence zone shall preferably be carried out on weekend and holiday or between 7 A.M to 10 A.M and 5 PM to 8 PM of other weekdays.				
	Heavy noise emitting equipment shall be fitted with silencer. Noise barrier shall be provided to generator set.				
	Reducing the noise produced from a vibrating machine by vibration damping i.e. making a layer of damping material (rubber, neoprene, cork or plastic) beneath the machine.		Site inspection and physical verification	DPMU	Weekly
	Explosion or blasting operation shall not be performed within 500-meter periphery of nearby local habitat or structure.	Blasting sites and measure adopted to reduce effect of vibration;	Consultation with local habitants		
	Contractor shall conduct vibration testing during blasting operation (if any) by engaging any third party at least at ten (10 - for whole project) location. Testing location shall be identified in consultation with DPMU and submit vibration report to DPMU.	Damage due to blasting/ vibration	Vibration testing;	Contractor	During Blasting Operation/ Each Site
	Demolition workers shall be provided with PPEs (earmuff) to minimise health impact due to noise pollution				
	The Contract Package ESMPs and Contractors ESMPs will specify the list of sensitive receptors (given in Section 4.16).				
	Regular monitoring of air emissions at the Sensitive Receptor locations.				
Vertical water fall with high velocity on the downstream side of crest may cause erosion	Apron/ wave breaker where ever required shall be provided for decapitation of excess energy	Apron/ wave breaker provided	Site inspection and physical verification	DPIU/ DPMU	Monthly
Water and land pollution due to debris from dismantling structures and spoil	Reuse of dismantled materials to the possible extent (C&D waste management plan given in Section 7.3.1 shall be applied);	Reuse and disposal of C&D items Water quality in nearby river/ stream;	Water quality report; Site inspection; Review of records / reports	DPMU	Weekly
	Unused / unusable materials shall be auctioned as per the procedures of Govt. / IWD or left-over C&D waste shall be disposed-off in the nearby sanitary landfill site.				

Annexure- 29: Model Code of Conduct (ESHS) for Contractor's Employees and subcontractors

1.introduction

This Code of Conduct will oblige all Contractor's Personnel (including sub-contractors and day workers) to abide by following practices, as a minimum. Additional obligations may be imposed during project implementation to respond to particular concerns of the region, the location and the project sector or to specific project requirements. Contractor may also impose any additional or strengthen code of conduct on his workers/ staff.

The Code of Conduct should be written in plain language and signed by each worker to indicate that they have:

- received a copy of the code;
- had the code explained to them;
- acknowledged that adherence to this Code of Conduct is a condition of employment; and
- understood that violations of the Code can result in serious consequences, up to and including dismissal, or referral to legal authorities.

A copy of the code of conduct will be displayed at prominent locations easily accessible to the community and project affected people. Name and contact number of the authorised representative of the contractor competent to attend the grievances of the local community or project affected persons should also be provided on the display board, in languages comprehensible to the local community, Project Manager's Personnel, and Employer's Personnel.

2.Model Code of Conduct (ESHS)

2.1 **None of Employees of the Contractor and the Subcontractor shall be involved in the following activities**:

- Burning of vegetation waste in open space.
- Unauthorized storage of inflammable substances or harmful non-desired chemical/ pesticide in labour camp or work site.
- Harm or disturbance (including hunting/ poaching) to any endangered or threatened species like Fishing Cat, Mongoose, Asian Small Clawed Otter, Fresh Water Turtles/Terrapins, Jungle Cat, Jackal, Monitor Lizard, King Cobra, White-eyed Pochard, etc., or plant species *Ficus religiosa* (a culturally significant tree).
- Harm or disturbance to any culturally significant site.
- Unauthorized removal of timber.
- Disposal of solid or liquid wastes in river/canal, water bodies, streams, etc
- Illicit or criminal activities including sexual harassment of women or children (prohibit use of language or behavior, in particular towards women and/or children,

that is inappropriate, harassing, abusive, sexually provocative, demeaning or culturally inappropriate).

- Violence including sexual and/or gender-based violence (for example acts that inflict physical, mental or sexual harm or suffering, threats of such acts, coercion, and deprivation of liberty
- Exploitation including sexual exploitation and abuse (for example the prohibition of the exchange of money, employment, goods, or services for sex, including sexual favours or other forms of humiliating, degrading behaviour, exploitative behaviour or abuse of power).
- Use of illegal substances and consumption of intoxicating materials
- Discrimination in dealing with the local community (including vulnerable and disadvantaged groups), Project Manager's Personnel, Employer's Personnel and also among themselves on the basis of family status, ethnicity, race, gender, religion, language, marital status, age, disability (physical and mental), sexual orientation, gender identity, political conviction or social, civic, or health status
- Open defecation
- Retaliation of workers who report violations of the Code, if that report is made in good faith.
- Fishing practice in local or community pond

2.2 The Code of Conduct (ESHS) shall ensure:

- Compliance with applicable laws, rules, regulations, consent conditions and the measures specified in the Contractor's ESHS-MSIP
- Compliance with applicable health and safety requirements to protect the Contractor's own employees or subcontractors (e.g. by wearing prescribed personal protective equipment at worksites or during undertaking any activity in relation to execution of work), local community (including vulnerable and disadvantaged groups), Project Manager's Personnel and the Employer's Personnel (e.g. taking all precautions to prevent avoidable accidents and promptly reporting to the Engineer/Employer on any accident that might have occurred at worksite)
- Regular interaction with the local community, members of the local community before initiation of work as well as during project implementation period. Public consultation to maintain community integrity and social links.
- Convey attitude of respect to affected person as well as regional culture and traditions
- Protection of children (persons less than 18 years of age) (including prohibitions against sexual activity or abuse, or otherwise unacceptable behaviour towards children, limiting interactions with children, and ensuring their safety in project areas)
- Use specified sanitary facilities provided by their employer and not open areas
- Avoidance of conflicts of interest (such that benefits, contracts, or employment, or any sort of preferential treatment or favours, are not provided to any person with whom there is a financial, family, or personal connection)
- Respecting reasonable work instructions (including regarding environmental and social norms)

- Protection and proper use of property (for example, to prohibit theft, carelessness or waste)
- Duty to report violations of this Code
- Store chemicals appropriately with proper labelling and promptly inform to relevant agencies on accidental spill or incident
