

**GOVERNMENT OF WEST BENGAL
IRRIGATION & WATERWAYS DIRECTORATE**

ANNUAL FLOOD REPORT – 2012

**DIRECTOR
Advance Planning, Project
Evaluation & Monitoring Cell
Jalasampad Bhawan, Salt Lake
Kolkata-700 091.**

April-2013

PREFACE

The State of West Bengal is the lower most riparian State in the Ganga Basin and most of the rivers in the State originate from outside the state boundary and are of inter-state/international category. The State is quite often ravaged by destructive flood, even without any appreciable rainfall within the geographical limits of the State. Along with flood, various allied problems like bank erosion, drainage congestion, cyclonic disaster accentuate the flood situation. The State being 42.30% of its geographical area flood prone, happens to be one of the prime flood prone States in the country.

The flood, water related disaster in the state of West Bengal has been an annual feature. Some parts of the state are victims of onslaughts of flood each year resulting severe loss to standing crops, cattle and human properties. The state has all possible facets of flood, drainage, bank erosion, cyclonic storm ravages and associated problems. It has been noticed that the furies due to flood have increased during the last two decades. In the State only nine years could be identified as flood free years since 1960 when only less than 500 sq.kms of area were inundated.

There is 10401 K.M of total length of embankment (out of which 1326.08 K.M Ex –Zamindary Embankment) is maintained by this department in the state of West Bengal. Till date work for protection of total 25380 sq K.M areas from flood has been undertaken by this department. Length of 280 K.M coastal belts of the State (including Creeks) and 65.4 K.M. of sea-dyke length (Digha) and 7.14 K.M. length of Sea wall is maintained by this department in the state.

Embankments in various districts of the State in general and Sundarban areas in particular are used as communication link, particularly during periods of calamity for safe passage of people and carrying relief materials. Disruption of such communication links leads livelihood activities almost to a grinding halt. Moreover, embankments, constructed either decades or century ago particular embankment are functioning as lifeline to the people of Sundarban since those prevent entry of diurnal high tidal water into the countryside where average ground level is substantially lower than the normal amplitude of high tide. Due to breach as well as washout of embankments major portion of the area becomes disconnected from basic facilities of life.

Many factors such as intensity and duration of rainfall, sedimentation in river bed, natural or manmade obstruction etc. play a role in the occurrence of flood. Study of these factors and evaluation of flood hazards every year for a given basin/sub-basin are indispensable for evolution of various flood management measures. Accordingly Irrigation & Waterways Directorate, at the end of each flood season, prepare annual flood report comprising rainfall pattern in the basin/sub-basin, rainfall in the districts, reservoir condition and major flood events of the year.

1. INTRODUCTION.

The state West Bengal crowned by the mighty snow-white Himalayas in the North and frothy sea on the South is a combination of land varying from high regions in the north and partly high in the south west to the plains in the rest areas. The state is beset with extensive network of rivers, their tributaries, rivulets, jhoras, canals, tanks beels and low lying pockets of water bodies. With the Tropic of Cancer running across it, the state is situated between 21°31' & 27°13'14" North Latitudes and 85°45'20" & 89°53' East Longitudes. The geographical area of the state is about 88,752 sq.km. with a population density of 1029 per sq.km. according to 2011(P) census.

West Bengal, a part of Bengal Delta, has a long recorded history of flood. It is because the landmass of the State was formed by the Ganga-Padma system of rivers through the delta building process of which flood is an adjunct being the main carrier of sediments, the bulk of fluvial deposit, in huge volumes. At present 42.3% of total area of the State is susceptible to flood. The highest affected area as recorded in 1978 is about 30,607sq.km. and in 2000 about 23,971 sq.km.

Ganges enters West Bengal near Rajmahal and then flows in a south-easterly direction. It divides into two near north of Dhulian in Murshidabad district. One branch enters Bangladesh as the Padma while the other flows through West Bengal as the Bhagirathi River and Hooghly River in a southern direction. The Bhagirathi is the main river in West Bengal which flows past some of the important cities like Murshidabad, Baharampur, Nabadwip, Chinsura, Chandannagar, Srirampur, Howrah, Kolkata, Diamond Harbour and Haldia. It releases its water into Bay of Bengal near Sagar Island in the South 24 Parganas.

The Mayurakshi, Ajay, Damodar, Kangsabati, Rupnarayan and their tributaries which rise in the Western plateau and high lands flow eastwards through the different districts of West Bengal and joins the Bhagirathi on the right bank. The Mayurakshi, which is fed by tributaries Brahmani, Dwarka, Bakreshwar and Kopai joins the Bhagirathi near Kalna through river Babla, the Ajay, which rises in the hills of Jharkhand, being joined by the Kunur, flows down the plateau fringe, marking the boundary between Bardhaman and Birbhum districts joining it near Katwa and Damodar, with its small meandering distributaries, small streams, Khari, Banka and Behula joins the Bhagirathi near Uluberia. The Damodar known as the sorrow of Bengal, is now controlled after formation of the Damodar Valley Project. The Dwarakeswar and Shilabati rivers join to form Rupnarayan and the Kangsabati and Keleghai rivers join to form the Haldi. The Rupnarayan and Haldi fall into the Bhagirathi in the Purba Medinipur district. The Subarnarekha river entering from Jharkhand and after flowing for a short distance in West Bengal re-enters into Orissa. These rivers carry plenty of water thus keeping the Bhagirathi river with optimum water throughout the year. The rivers along with water carry silt and sand eroded from the western plateaus and deposits them in the Bhagirathi and the rivers themselves. This silting is causing great inconvenience for the Kolkata Port and often results flooding in the years of heavy rain.

The distributaries of the Padma River like Bhairab, Jalangi, Mathabhanga River and their tributaries enters West Bengal and joins the Bhagirathi on its left bank. The Bhairab and the Jalangi meet and their joined course known as Jalangi falls into Bhagirathi. The Mathabhanga divides into branches namely; Churni and Ichhamati, The river Churni meets the Bhagirathi while the other flows southwards and joins the Kalindi.

The Sunderbans region is covered by numerous estuaries and streams, mainly distributaries of main rivers. The rivers are interconnected and are fed by tidal waters. The major rivers of the area are Hoogly, Matla, Gosaba, Saptamukhi, Haribhanga, Piyali, Thakuran/ Jamira, Raimangal, Kalindi and Ichhamati.

The Teesta flows cutting deep gorges from north to south in the mountainous Darjeeling district, it enters the plains at Sevoke and flows in a mighty stream on straight line towards the south east until it pours its waters into the Brahmaputra in Bangladesh. Torsa, Jaldhaka, Kaljani, Raidak, Sankosh and Mahananda rivers are in the northern hilly region which rise in the Himalayas and flow in a southerly direction through the districts of Darjeeling, Jalpaiguri, Cooch Behar and North and South Dinajpur and enters Bangladesh. As most of the rivers are snow fed, most of the rivers are perennial in nature and often floods during the rainy season. The entire region is made up of sand, gravel and pebbles laid down by these rivers. The Mahananda rises from the Dow Hills forest, near the town of Darjeeling and are fed by similar small rivers like, Mahanadi, Balason, and Machi and runs in a zig-zag way through the district of Malda and joins the Padma in Bangladesh. In the central region, the main river is the Mahananda. The Tangon, Punarbhabha, and Atrai arises in the plains, while the former two joins together and flows into Mahanadi, Atrai flows into the Padma.

Classification of areas

1	Geographical Area	88,752 sq.km.
2.	Area under Forest	11,880 sq.km.
3.	Total Flood Prone Area	37,660 sq.km.
4.	Area already protected	25,000 sq.km.

1.1

RIVER BASINS

The state can be demarcated into three distinct drainage basins coming under the Ganga, Brahmaputra and Subarnarekha system respectively. These three main river basins can in turn be divided into Sub-basins having individual catchment of their own. The area-wise distribution of the above main basins in the state are as under –

1.	Brahmaputra Basin	11,860 sq.km.
2.	Ganga Basin including Sundarban Area	74,732 sq.km.
3.	Subarnarekha Basin	2,160 sq.km.

1.2**RIVER SYSTEM****1.2.1*****Brahmaputra Basin Drainage System***

The rainfall in the northern region of the state is generally high. The ground slope is steep enough particularly in the Sub-Himalayan regions of the northern districts. Except Darjeeling, all the areas belong to Brahmaputra Basin. This system consists of a total area of 11,860 sq.km. nearly 14% of the geographical area of the state. This basin area is interspersed with a large number of drainage channels which join the main drainage arteries of the regions like the rivers Teesta, Torsa, Raidak, Mansai, Jaldhaka etc. All these rivers originate from the Himalayas in Bhutan/Sikkim and flow across the Terai region and reach the plains of West Bengal and then flow to Bangladesh joining ultimately the Brahmaputra in Bangladesh. The rivers feeding the river Brahmaputra have number of tributaries as under –

Sl.No.	River Basin	Catchment area in sq.km.	Tributaries
1.	Sankosh	172	Chiklajhore
2.	Raidak	807	Raidak-I, Raidak-II, Turturi
3.	Torsa	3419	Kaljani, Sil-Torsa, Char-Torsa Dolong, Sanjai, Ghargharia, Garam, Diana, Pana, Jainti, Gabur-Basra
4.	Jaldhaka	3746	Mujnai, Murti, Diana, Sutanga, Dolong, Dharala, Ghatia, Kumla, Gilandi, Duduya
5.	Teesta	3716	Great Rangeet, Ramam, Rangpoo, Mechi, Leesh, Ghish, Chel, Mal, Neora, Karala.

BRIEF DESCRIPTION OF RIVERS UNDER BRAHMAPUTRA BASIN**(A) SANKOSH**

The river Sankosh with its origin in Bhutan is the eastern most river of Brahmaputra river basin. It serves as the boundary between the two states West Bengal and Assam. It joins with Raidak-II and finally falls into Brahmaputra in Bangladesh by name Gangadhar.

(B) RAIDAK.

It originates in Mt. Akungphu at an altitude of 6400 m. in Bhutan. The river Raidak then bifurcates into two channels namely Raidak-I and Raidak-II at Bhutanghat, close to Indo-Bangladesh border. Raidak-I joins the united stream of Torsa and Kaljani, while Raidak-II is joined by Sankosh and finally outfalls into Brahmaputra in Bangladesh by the name Gangadhar.

(C) TOSA

The river Torsa originates in Chumbi Valley of southern Tibet at an altitude of 7065 M. It flows through Tibet, Bhutan, West Bengal and Bangladesh. Below Hasimara bridge

on NH-31, it bifurcates into two channels viz. Sil-Torsa and Char-Torsa. They reunite at Patla Khowa forest. The river passes by the Coochbehar town and is joined by river Kaljani and Raidak-I. The combined flow outfalls into Brahmaputra near Nageswari at Rangpur in Bangladesh.

(D) JALDHAKA

The river Jaldhaka has its origin at Bitang Lake in Sikkim at an altitude of 4400 M. It flows through Sikkim, Bhutan, West Bengal and Bangladesh. After the river is joined by a number of streams and tributaries both in mountainous and sub-mountainous regions, it finally flows into river Dharala and the combined system, by the name Dharala ultimately outfalls into Brahmaputra in Bangladesh.

(E) TEESTA

Teesta – the mighty river of North Bengal originates in the glaciers of North Sikkim at an altitude of 6400 M and is formed by the union of two streams viz. Lachen and Lachung at Chungthung in Sikkim. It enters West Bengal at Rangpoo and upto Mechi, it forms the boundary between West Bengal and Sikkim. Two of its tributaries- Great Rangit and Rammam also serve as the natural boundary between the two states. The river finally outfalls into Brahmaputra in Rangpur district of Bangladesh.

Status of gauge stations over Brahmaputra is tabulated below:-

River	Gauge Station	D.L	E.D.L	Remarks
SANKOSH	L.R.P. Crossing	48.200	49.100	
RAIDAK.	Raidak-I, L.R.P. Crossing	46.700	47.600	
	Raidak-II,L.R.P. Crossing	48.100	49.000	
TORSA	Hasimara	116.300	116.900	
	Kaljani/Alipurduar	45.100	45.700	
JALDHAKA	N.H. -31 Crossing	80.000	80.500	
	Diana/Chengmari	200.500	201.400	
	Mansai/Mathabhangal	47.700	48.200	
TEESTA	Coronation Bridge	149.400	151.800	
	Domohani	85.650	85.950	

1.2.2 GANGA BASIN

The two holy rivers – Bhagirathi and Alakananda originating from the glaciers of the Himalayas at an altitude of 7000 M. join at Dev prayag and the combined stream is known as the Ganga. It emerges into the plains at Rishikesh in Uttarakhand. After flowing exclusively through Uttarakhand and Uttar Pradesh it receives the flow of Yamuna, the largest tributary at Allahabad. The Ganga forms the boundary between Uttar Pradesh and Bihar for a length of about 110 km. and the river then enters Bihar and flows more or less through the middle of the state. After its confluence with the Kosi, the Ganga continues its eastward flows in Bihar for about 40 km. and then it enters West Bengal.

As it enters West Bengal, the river swings round the Rajmahal hill range and then starts flowing almost due south. The river then bifurcates into two arms about 40 km. below Farakka. The left arm called the Padma flows eastwards into Bangladesh while the right arm called Bhagirathi continues to flow south through West Bengal. The stretch of the river after Nabadwip is called Hooghly and ultimately outfalls into the Bay of Bengal near Sagar Island.

The Central, Southern and the South-Western parts of the State of West Bengal constitute the Ganga Basin.

The total length of the river Ganga from its point of origin to the point where it falls into sea is about 2575 km. (measured along Bhagirathi and the Hooghly), of which 1450 km. lies in Uttarakhand and Uttar Pradesh, 110 km. along Uttar Pradesh and Bihar border, 445 km. in Bihar and 570 km. in West Bengal.

The Ganga system comprises a total area of 74,732 sq.km. within the state of West Bengal. The catchment areas of different rivers within this system in the state of West Bengal are as under :

Sl.No.	Name of River Sub-Basin	Catchment Area in Sq.km.
1	2	3
(a)	Mahananda	9,640
(b)	Punarbhava	730
(c)	Atrai	910
(d)	Pagla-Bansloj	730
(e)	Dwaraka-Brahmani	2,500
(f)	Bhagirathi-Hooghly	1,170
(g)	Jalangi	5,344
(h)	Mayurakshi	2,720
(i)	Ajoy	2,490
(j)	Khari-Gangur-Ghea	4,460
(k)	Churni	800
(l)	Damodar	5,250
(m)	Dwarkeswar	4,430
(n)	24-Parganas(South & North) and Kolkata Port Drainage Basin	4,619
(o)	Kangsabati	8,369

(p)	<i>Silabati</i>	3,952
(q)	<i>Rupnarayan</i>	2,548
(r)	<i>Pichabani</i>	820
(s)	<i>Rasulpur</i>	1,130
(t)	<i>Haldi</i>	980
(u)	<i>Tidal zone (Sundarban Area)</i>	11,320

The different tributaries of these rivers are listed below –

Sl.No.	Name of River	Tributaries
1	2	3
1.	<i>Mahananda</i>	<i>Mechi, Balason, Dauk, Nagar, Kulik, Gamari, Chiramati, Tangon, Kalindri</i>
2.	<i>Punarbhava</i>	<i>Punarbhava</i>
3.	<i>Atrai</i>	<i>Atrai</i>
4.	<i>Pagla</i>	<i>Pagla, Bansloj, Bagmari</i>
5.	<i>Brahmoni</i>	<i>Brahmoni, Dwarka</i>
6.	<i>Bhagirathi</i>	<i>Bhagirathi, Hooghly</i>
7.	<i>Jalangi</i>	<i>Jalangi, Silamari, Bhairab, Suti</i>
8.	<i>Mayurakshi</i>	<i>Mayurakshi, Babla, Siddheswari, Kuiya, Kopai, Bakreswar, Sal, Monikornika, Daoki, Kana, Mor, Gambhira.</i>
9.	<i>Ajoy</i>	<i>Ajoy, Hinglow, Kunoor, Pathro, Jayanti,</i>
10.	<i>Khari-Gangur-Gheea</i>	<i>Khari, Brahmoni, Banka, Bangour, Gheea, Behula, Kana</i>
11.	<i>Churni</i>	<i>Churni</i>
12.	<i>Damodar</i>	<i>Damodar, Barakar, Sali.</i>
13.	<i>Dwarkeswar</i>	<i>Ganddheswari, Dwarkeswar, Arkasha, Berai.</i>
14.	<i>Rupnarayan</i>	<i>Mundeswari, Dwarkeswar, Berai, Tarjuli, Sankari, Silabati, Joypanda, Kubai, Parag, Kanki, Ganddheswari, Damodar</i>
15.	<i>Haldi</i>	<i>Haldi, Banki, Kangsabati, Kumari, Bhairab, Tarafeni, Kaliaghai, Bagchai, Chandra, Kapaleswari.</i>
16.	<i>Rasulpur</i>	<i>Rasulpur, Pichabani.</i>
17.	<i>Tidal Rivers</i>	<i>Tolly's Nullah, Keorapukur, Ichamati, Raimongal, Kultigong, Jamuna, Kalindi, Haroa, Bhanga, Gosaba, Metia, Piali, Thakuran, Raidighi, Saptamukhi, Buriganga, Matla, Dansa, Kalagachi, Bidyadhari, etc.</i>

BRIEF NOTES ON THE SUB-BASINS

1. MAHANANDA.

The river Mahananda originates from Ghoom near Darjeeling town in the district of Darjeeling. The Mahananda river system lies between latitude 25°15' N to 26°15' N and longitude 87°45' E to 88°15' E. It is bounded on the north by the Himalayas, in the east by the ridges separating it from Teesta river system, the river Ganga on the South and the Kosi river system in the east. The river bifurcates into two channels at Barsoi in Bihar. Out of the two branches one flows through Bihar by the name Fulahar and the other flows through West Bengal as Mahananda. The river Mahananda carrying the flow of four tributaries namely, Nagar, Kalindri, Tangon and Punarbhaba, drains into the river Ganga from the North-Western side at Godogarighat just downstream of the point where Ganga leaves the boundary of West Bengal.

Status of gauge stations over Mahananda is tabulated below:-

river	Gauge Station	D.L	E.D.L	Remarks
MAHANANDA	Hill Curt Road	115.970	116.590	
	Sonapur	75.770	76.380	
	Jhawa	31.400	32.010	
	Dangraghat	35.650	36.260	
	Englishbazar	22.750	23.500	
	Sui/Pajol	27.430	28.000	
	Sui/Katchua	25.490	26.090	
	Tangon/Radhikapur	33.450	34.050	
	Tangon/Banshihari	25.600	26.210	
	Nagore/Makdampur	31 540	31.860	
	Kullick/Railway Bridge	31.200	32.690	
	Dauk/Chopra	69.460	70.070	
	Gamari / Itahar	26.820	27.410	
	Fulhar/Teljana (Protected)	27.430	28.350	
	Fulhar/Teljana (Unprotected)	26.820	27.430	

2. ATRAI-PUNARBHABA

Some rivers like Sahu, Neem, Talma, Chaoai, Panga originating from the high lands in districts of Jalpaiguri, meet together afterwards. This combined stream assumes the name Karotowa. It then enters Bangladesh by the name Atrai. The river Atrai then bifurcates into two channels namely Dheepa and Atrai. The Western Channel–Atrai re-enters West Bengal in South Dinajpur district covering a length of 40

km. in the state. It again enters into Bangladesh and ultimately outfalls into river Brahmaputra.

The Dheepa on the other hand taking a South – Westernly course enters Gangarampur P.S. in South Dinajpur district assuming the name Punarbhaba. Covering a length of about 40 km. in the district it touches the eastern boundary of Maldah district and finally enters Bangladesh. Further down, Punarbhaba meets the river Mahananda in Bangladesh.

Status of gauge stations over Punarbhaba is tabulated below:-

River	Gauge Station	D.L	E.D.L	Remarks
PUNARBHAVA	Gangarampur	25.820	26.420	
ATRAI	Balurghat	23.150	23.760	

3. NAGAR-KULICK, GAMARI-CHIRAMATI, TANGON, KALINDRI

All these rivers flow through the districts Malda and North Dinajpur. In course of their flow, somewhere they form the boundary either between West Bengal and Bihar or between West Bengal and Bangladesh. These rivers ultimately outfall into the river Mahananda.

Nagar, originating in Bangladesh flows along the boundary of West Bengal and taking a Southeasternly course, receives a spill channel of Mahananda and is joined by Kullick, which has also its origin in Bangladesh. Gamari and Chiramati are two small rivers that flow through North-Dinajpur district before they are united. This combined stream finally outfalls into the river Mahananda.

Tangon is a tributary of river Mahananda. It rises in Bangladesh. It flows through the district of North-Dinajpur and Malda and meets Mahananda on the boundary of Malda and Bangladesh.

River Kalindri originating in North Bihar flows through the plain of Purnia district. It enters West Bengal in the Malda district and outfalls into Mahananda.

4. PAGLA-BANSLOI-BRAHMANI

These rivers originate from the Rajmahal hills in the district of Bihar. Flowing easternly across Birbhum district, they entered Murshidabad district as the tributaries of the river Bhagirathi.

Status of gauge stations over Pagla-Bansloi & Brahmoni is tabulated below.

River	Gauge Station	D.L	E.D.L	Remarks
PAGLA-BANSLOI	Bansloi	31.850	32.760	
BRAHMONI-DWARKA	Brahmani/ADB Road Crossing	33.000	33.400	
	Dwarka/Sankoghat	20.400	21.300	
	Ranagram	17.36	17.86	

5. JALANGI-BHAIRAB

The river Jalangi originates from the right bank of the river Padma in Murshidabad district, 165 km. downstream of Farakka. Jalangi is dead for all purposes except during the periods of rain, when it receives water from Padma. The river ends its journey by finally outfalling into the river Hooghly near Nadabwip town in Nadia district in West Bengal.

The river Bhairab starts its journey from the river Ganga in P.S. Lalbag of Murshidabad district. It is now almost a dead channel but during rainy season it receives water from Padma.

Status of gauge stations over Jalangi is tabulated below:-

River	Gauge Station	D.L	E.D.L	Remarks
JALANGI	Swarupganj	8.440	9.050	

6. ICHAMATI-CHURNI

The river Mathabhanga originates from the mouth of the Jalangi of Padma. It is not an important river in this stage, as it flows mainly through Bangladesh. It flows only a few kilometers within the district of Nadia. At this stage, the river bifurcates into two streams – the eastern course runs a few kilometres through the districts in a south-east directions to meet Bhagirathi by the name Churni and the other course flows by the name Ichamati. Ichamati gets a little supply from Padma and thrives on wash out by tidal flows.

Status of gauge stations over Ichamati & Jamuna is tabulated below:-

River	Gauge Station	D.L	E.D.L	Remarks
Ichamati	Mejdia	7.824	8.410	
	Bongaon	5.075	5.675	
Jamuna	Gaighata	3.900	4.500	
	Gobardanga	3.770	4.370	

7. BHAGIRATHI-HOOGHLY

The Ganga Brahmaputra Meghna river system constitutes one of the largest river systems of the world in terms of its water resources. The river Ganga originating in the Himalayas in India, drains a vast area. Near its deltaic head at Farakka it divides into two channels, the Bhagirathi-Hooghly and the Padma. The Bhagirathi-Hooghly flows through West Bengal and outfalls in Bay of Bengal and the Padma crosses over into Bangladesh and joins the Brahmaputra at Goalundo.

The river Bhagirathi divides the Murshidabad district into two parts. It receives three right bank tributaries namely the Bagmari-Pagla, the Mayurakshi and the Ajoy. It receives the Jalangi just upstream of Nadabwip town from the left. After its confluence with the Jalangi, the Bhagirathi is known as the Hooghly.

The Bhagirathi-Hooghly is the main river in the state and is the main drainage artery for the southern districts draining almost the entire area. Before 12th century, the Ganga had its main course down Bhagirathi-Hooghly. Subsequently, the main flow was pushed to the east through the present course of Padma. The flow of Bhagirathi increases downstream due to the run off and outflows receives from a number of eastern and western tributaries. It also form the boundary between 24-Parganas and Hooghly districts.

Status of gauge stations over Bhagirathi is tabulated below:-

River	Gauge Station	D.L	E.D.L	Remarks
BHAGURATHI-HOOGHLY	Jangipur	20.270	20.880	
	Berhampore	17.220	17.830	
	Katwa	13.710	14.320	
	Kalna	7.630	8.240	

8. MAYURAKSHI-BABLA

Mayurakshi originates from the high lands of Santhal Parganas. It is the main river of Birbhum district. Several spill channels – the Manikornika, Kana Mor, Gambhira etc. take off from the Mayurakshi in its lower reaches. All these rivers flow into the lower pocket of Hijal Beel in the district of Murshidabad. From the Beel, the river Babla starts its journey finally draining into the river Bhagirathi. The drainage and flood level in the Hijal Beel is considerably influenced by the level rulling in the Bhagirathi.

Status of gauge stations over Mayurakshi during the rainy season is tabulated below:-

River	Gauge Station	D.L	E.D.L	Remarks
MAYURAKSHI	Narayanpur	27.990	28.790	

9. AJOY

The river Ajoy originates from the hills near Deoghar in Jharkhand. The Principal tributaries of the river are - Hinglow, Kunoor, Pathro and Jayanti. The floods of this river are flashy and of short duration. There are some pockets in the Ajoy-Kunoor catchment which suffer from frequent inundation. Large areas of Burdwan and Birbhum districts face inundation whenever floods of the Ajoy synchronize with that of the Mayurakshi, the Pagla, the Bansloi and the Bhagirathi.

Status of gauge stations over Ajoy during the rainy season is tabulated below:-

River	Gauge Station	D.L	E.D.L	Remarks
AJOY	Sikatia	165.640	166.240	
	Katwa	14.48	15.04	
	Gheropara	39.410	40.41	
	Budra	39.426	40.341	

10. DAMODAR

The river Damodar originating from Palamau hills in Jharkhand, bifurcates into two channels at Beguahana. The main flow passes through Mundeswari channel and discharges into Rupnarayan. The other one Amta channel carries discharge during high flood and outfalls into the Hooghly. The river causes floods in its lower reaches in the districts of Burdwan, Hooghly and Howrah, mainly on the right bank of the river below Beguahana.

Status of gauge stations over Damodar during the rainy season is tabulated below:-

River	Gauge Station	D.L	E.D.L	Remarks
DAMODAR	Randia	52.134	52.893	
	Edilpur	32.790	32.950	
	Jamalpur	23.237	23.542	
	Amta	5.640	6.240	
DAMODAR	Champadanga	12.890	13.500	
	Mundeswari/Harinkhola	12.600	13.410	

11. DWARAKESWAR-SILABATI-RUPNARAYAN

Dwarakeswar originates from the high lands of Purulia district. River Gandheswari rising from Bankura district meets Dwarakeswar near Bankura town receiving water from streams like Arkasha, Berai, enters Hooghly district and meets Silabati to form Rupnarayan.

Silabati also originates in Purulia district. It traverses through the district of Midnapore. The river receives water of Joypanda and meets with Dwarakeswar to form Rupnarayan.

Rupnarayan is a combination of number of streams. The tidal reach below confluence of Dwarakeswar and Silabati is known as Rupnarayan. It outfalls into Hooghly after receiving mainflow of Damodar through Mundeswari and branch of Kangsabati. The river is tidal throughout its entire course.

Status of gauge stations over Dwarakeswar-Silabati & Rupnarayan during the rainy season is tabulated below:-

River	Gauge Station	D.L	E.D.L	Remarks
DWARAKESWAR	Arambag	17.220	17.830	
	Shakepur	11.750	12.350

12. KANGSABATI-KALIAGHAI-HALDI

The river Kangsabati originating from Purulia district is joined by Kumari in Bankura district. Further down, it is joined by the combined streams of Bhairab Banki and Tarafeni rivers and thereafter it flows through the Midnapore district. After a tortuous course, it bifurcates. The upper branch known as old Cossye or Palaspai Khal outfalls into the Rupnarayan and the other one is known as New Cossye.

The river Kaliaghai trickles out from Jhargram, P.S. in Midnapore district. During the course of its journey, it is fed by the flow of its tributaries namely Kapaleswari, Baghai and Chandia. This combined flow meets the other arm of Kangsabati i.e. New Cossye to form Haldi.

The river Haldi formed by joining of New Cossye and the combined flow of Kaliaghai outfalls into the river Hooghly. The lower portion of the river Haldi is affected by over bank spills and drainage problem during the monsoon.

Status of gauge stations over Kangsabati & kaliaghai during the rainy season is tabulated below:-

River	Gauge Station	D.L	E.D.L	Remarks
KANGSABATI	Mohanpur (Cossye)	25.750	26.360	
	Kalmijole (Old Cossye)	9.290	9.900	
	Panskura (New Cossye)	9.290	9.900	
KALIAGHAI	Bakhrabad	8.40	8.85	
	Dehati	6.55	7.00	
	Amgachia	5.79	6.400	
	Kalipandap	5.00	5.60	

13. RASULPUR

The river Rasulpur is formed by three streams namely Bagda, Sarpai and Madhakhali. It is the main river of Contai Sub-Division of Midnapore district. It acts as the main drainage for Dwarakeswar, Silabati and large portion of the Kangsabati rivers. It causes flooding in two regions namely Dubda and Contai areas. The river ultimately falls into the river Hooghly.

14. TIDAL RIVERS OF SOUTHERN WEST BENGAL.

Apart from the rivers described earlier within the Ganga and the Brahmaputra river systems, there is a group of rivers in Southern part of the State which falls in the deltaic zone. These rivers mostly lie in the deltaic zone to the east of the Hooghly river popularly known as Sundarbans and form an intricate network with a number of criss-cross inter connecting channels, thus dividing the land spill channels of Ganga, then upland supply running dry, during winter months. But gradually their off-takes from

Ganga have deteriorated and in some cases being cut-off from the river. Now these rivers drain off whatsoever fresh discharge comes from country sides, thus ultimately draining into Bay of Bengal through one or other of the principal estuaries in the area which are, starting from Hooghly river successively the Bartala of Muriganga or channel creek, Saptamukhi, Matla, Gosaba, Hariabhangha, Raimongal etc.

The Tolly's Nullah or the Adi Ganga, as it is sometimes called is a small but important tidal creek draining into the Hooghly from the left in the vicinity of the city of Kolkata.

1.2.3 SUBARNAREKHA BASIN

The river Subarnarekha though it has small catchment within this state, has got separate entity as it directly falls into the Bay of Bengal. Originating in the Chhotonagpur Range at an elevation of 609.00 M it traverses through three states – Jharkhand, West Bengal and Orissa. It drains a total area of 18,951 sq.km. of which 13,590 sq.km. in Jharkhand, 2,160 sq.km. in West Bengal and 3201 sq.km. in Orissa. The main tributaries of the river are Kanchi and Kharkai above Chandil in Jharkhand, and Dolong in West Bengal.

Status of gauge stations over Subarnarekha during the rainy season is tabulated below.

River	Gauge Station	D.L	E.D.L	Remarks
SUBARNAREKHA	Gopiballavpur	45.50	46.50	
	Bhasraghat	HFL	24.25	
	Sonakonia	16.150	16.750	

2. RAINFALL

Due to its physical and geographical position, the state, apart from diverse characteristics like physical, topographical has climatological variations as well. The average rainfall in the state is 1750 mm, of which more than 75% occurs during the monsoon period while the hilly region at the foot hills receives the heaviest rainfall ranging from 2500 mm to 5000 mm, the southern districts in the plains receive average of 1125 mm to 1875 mm. The main rainfall season in this state is the South-West monsoon season during which the entire land (excepting the extreme north, the extreme north-east and extreme south) gets 75% of the annual rainfall. The gangetic plains of West Bengal gets 78% of its annual rainfall during the monsoon period. During last seventy five years, the date of onset of monsoon over West Bengal was spread between last week of May to last week of June with its withdrawal between last week of September to second week of October. This year the monsoon over West Bengal spread between early first week of June to second week of October.

2.1 RAINFALL PATTERN

The river Ganga divides the state into two parts, which are by and large homogeneous from the meteorological point of view. The northern half is designated

as 'Sub-Himalayan West Bengal' and the southern half as 'Gangetic West Bengal'. Sub-Himalayan West Bengal is more susceptible to heavy rains both in respect of amount as well as in frequency of occurrence. Very heavy rain is more frequent in first two months (June and July) than in subsequent, in the Sub-Himalayan West Bengal. In Gangetic West Bengal the frequency is maximum in August followed by June, July and September in that order.

On the basis of rainfall distribution, the state can be divided into two broad zones –

- (i) *The Himalayan and Sub-Himalayan Region,*
- (ii) *The Gangetic Plains.*

2.1.1 HIMALAYAN AND SUB-HIMALAYAN REGION.

The Himalayan and Sub-Himalayan Region comprising the districts- Darjeeling, Jalpaiguri, Coochbehar and Northern part of Islampur Sub-Division of Uttar Dinajpur district of high intensity of rainfall from 2000 mm. to over 4000 mm. about 80% of which is found to occur during monsoon season. On the average Darjeeling, Coochbehar and Jalpaiguri get 114, 112, 110 rainy days respectively in a year. The monsoon generally follows a northerly track to ultimately break up against Eastern Himalaya causing very heavy rainfall and thereafter trough of low pressure under break monsoon conditions. It then shifts northwards to the Himalayan foothills. It has been found that a precipitation to the tune of 200 to 300 mm. in two hours is not unusual while in more than forty occasions of rainfall of 250 mm. and above have been registered during 1891-1965.

2.1.2 GANGETIC PLAINS

The gangetic plains which constitute the major portion of the state, can be further sub-divided into the following three sectors on the basis of average rainfall –

Sector – I : Comprising districts – Bankura, Burdwan, Hooghly, Nadia and Purulia which receive an average rainfall – between 1140 mm and 1400 mm.

Sector – II : Comprising districts – Birbhum, Midnapore, Murshidabad and North 24-Parganas having an average annual rainfall between 1400 mm and 1650 mm.

Sector – III : Comprising districts – Howrah and South 24-Parganas having an average annual rainfall – between 1650 mm and 1900 mm.

Such regional variations in the precipitation pattern causes flood conditions from time to time.

This year (2012) rainfall all over West Bengal was below normal. In the Gangetic West Bengal region, Birbhum(-24%), Hooghly(-23%), Howrah(-25%), Murshidabad(-30%), Nadia(-32%), and South 24 Parganas(-32%) and in the Sub Himalayan region, Malda(-37%) and North Dinajpur(-29%) districts, experienced substantial deficit rainfall.

The monthly, annual, monsoon period rainfall data for the districts as collected from Indian Meteorological Department, Alipore, Kolkata are shown in separate annexure from A1 to A5.

Gauge levels of important rivers during the monsoon period of 2012 along with relevant graphs are given in Annexure from G-1 to G-82.

Reservoir along with outflow of different dams and barrages (Tenughat Dam, Tilpara Barrage, Masanjore Dam, Maithon Dam, Durgapur Barrage, Kangsabati Barrage & Panchet Dam) during monsoon period are given in annexure).

1 to Rtt15The month

3. 2012 - A YEAR OF FLOOD

This year the state had experienced flood like situation mainly in three spells in the month of June'12 and July'12 & September'12 due to monsoon in the North Bengal districts like Darjeeling, & Jalpaiguri. In coastal districts i.e. South & North 24-Parganas, Kolkata, Purba and Paschim Medinipur, flood like situation occurred due to heavy rainfall in the 1st week of September.

No remarkable release of water from various reservoirs within and outside State boundary combined with run-off of the uncontrolled catchment caused swelling in various districts, has been observed. Maximum discharge from Durgapur Barrage was 85723 cusec on 17.08.2012 and due to this Damodar at Amta and Hurhura Khal at Muchighata have crossed Extreme Danger Level within 18.08.12 to 19.08.12. No flood release has been observed from Massanjore Dam and Tilpara Barrage. Maximum release from Kangsaboti-Kumari dam has reached to 10587 cusec on 18.09.12 to 21.09.12. Maximum discharge from Galudih barrage reached to 93500 cusec on 17.09.12 but level of Subarnarekha did not touch the Danger Level at any gauge stations over it. Due to a sudden rainfall at Purihansa and Hura (above 200 mm in a day) on 06.09.12 the combined discharge of Darakeswar-Gandheswari river reached to 57820 cusec at Bankura and due to this gauge level of Darakeswar river increased but not crossed the Dander Level at Arambag or Shakepur.

Damages in the nature of breach, rain cuts, ghoghs, slips, subsidence and erosion to the embankments and other appurtenants of the I&W Department had occurred in this season. Major damages occurred in 66 no. blocks and 5 no. municipality of 11 no. districts of West Bengal namely Darjeeling, Jalpaiguri, Coochbehar, Malda, Uttar Dinajpur, North & South 24 Parganas, Howrah, Hooghly, Purba Medinipur and Paschim Medinipur . The Major Breach has been occurred on Manabari Embankment for a length of approx. 200 metre on the left bank of river Ghish at Manabari under block Mal due to heavy rainfall occurred at Malbazar (219.40mm) on 11.09.2012, for a length of 300 metre on the Champasari Embankment on the R/B of river Mahananda under block – Matigara in dist. Darjeeling on 15.07.2012 and Major damage to embankment over river Fulahar at Debipur on 23.07.2012.

In the year 2012 about 152.83 sq km. area was inundated, which is 0.20% of total geographical area of the state. District wise detailed damage report is shown in a separate annexure.

4. CONCLUSION

The West Bengal is basically recipient of run-off generated outside the state. The state has a typical basin characteristics. In the north the rainfall is high and the ground slope is steep mainly in the Sub-Himalayan region. The rivers in the Terai region are wide with shallow depth. Due to continuous denudation of forest cover, Dolomite mining in the hills, the river beds are being silted up day by day reducing the carrying capacity of the rivers causing the flood. In the South & Central Region heavy rainfalls and run-off coming from the upper catchment cause drainage congestion and inundation due to very flat ground slope of the regions.

Main structural measures of flood control in West Bengal are embankments measuring 10000 km. (approx.) spread over different river systems, constructed over the years. There are dams across the Kangsabati, the Mayurakshi and the Damodar river system. But only in the Damodar river system the dams moderate the peak flood to some extent. The other structural measures like catchment area treatment and afforestation in upper catchment requires intervention at Government of India level as they are outside the state.

In North Bengal, an elaborate flood warning system maintained by the department warns the people about the trend of rise of the rivers and thus alarm them to take necessary safety measures. In Central & South Bengal the water level of different rivers together with their danger & extreme danger levels and releases from different dams and reservoirs are intimated to different authorities from time to time during rainy season. Besides, the department also tries to maintain contact with Indian Meteorological Department, Kolkata to get information on adverse weather condition during the monsoon period and to take possible measures. Central Water Commission also extends their co-operation in supplying the conditions and trends of important river conditions in addition to rainfall data at different rain gauge stations.

Besides the department has already opened its own website (www.wbiwd.com) to make available daily rainfall data and river gauge levels with trend at different stations.

The flood management of the state is a vast problem. The problem cannot be tackled by the state government alone. It requires close liaison of different organisations. The flood awareness particularly understanding about the complexity of the causes of flood and vulnerability of West Bengal will require help of NGO's and Panchayet Raj Institutions. The flood is a problem to be admitted by the society and the people of an area are to formulate their own action plan in close liaison with different Government organizations.
